BENEFITS OF ATTENDING THE WORKSHOP

Writing an effective paper either for a conference or for a journal poses extensive hardships to the enterprising researchers because it requires appropriate contents, innovative ideas, experimentation, testing and validation of results, implications for real time applications, proper interpretation of the existing studies, appropriate language and style which include writing skills and better presentation.

The efficient way of summarizing the critical review of literatures is to identify and ensure the gap in research to avoid plagiarism. This is conducive to conceptualize the gap in research as the scholar's original hypothesis to be proved in their intensive experiments and requires modellina which specialized demonstrable skills towards international PhD standards. This two day programme on "How to Write Good Quality Research Articles and LaTeX" will provide a unique experience of writing effective research papers to the participants which will lead them ultimately to become successful authors in their fields of research.
