ABOUT WORKSHOP

A research problem is a definite or clear statement about an area of concern, a condition to be improved upon or a difficulty to be eliminated that points to a need for meaningful understanding and deliberate investigation. The formulation of a research problem is the first and most important step of the research process. This is more like identifying a destination prior to beginning a journey. A research problem identification is like the foundation of a good research. A research problem can begin with something simple to something very complex, depending on the nature of the research theme. The next major step in research is writing a technical paper. The objective of organizing

a research paper is to allow people to understand and preferably apply the research work selectively. The findings and outcomes of the research must be presented precisely and analyzed properly for progressive usage in the research community. Our workshop promises to support young researchers to have a stepping stone towards emerging quality research.
