

# **K.L.N.COLLEGE OF ENGINEERING**

**Pottapalayam, Sivagangai District**

**(An Autonomous Institution Affiliated to Anna University, Chennai)**

## **CURRICULUM & SYLLABUS**

### **CHOICE BASED CREDIT SYSTEM**

**(REGULATIONS 2020)**

**I to IV Semester**

**M.E. Communication Systems**

**Department of Electronics and Communication  
Engineering**

## **VISION OF THE INSTITUTION**

To become a Centre of Excellence in Technical Education and Research in producing Competent and Ethical professionals to the society.

## **MISSION OF THE INSTITUTION**

To impart Value and Need based curriculum to the students with enriched skill development in the field of Engineering, Technology, Management and Entrepreneurship and to nurture their character with social concern and to pursue their career in the areas of Research and Industry.

## **VISION OF THE DEPARTMENT**

To promote as a center of excellence in educational and research activities related to electronics and communication engineering and its allied areas.

## **MISSION OF THE DEPARTMENT**

To create educational and research environment to meet ever changing and ever demanding needs of electronics and communication industry along with IT and other interdisciplinary fields.

To mould the students to become ethically upright and recognized as responsible engineers.

**PROGRAMME EDUCATIONAL OBJECTIVES (PEOs):**

- To provide students with strong fundamental concepts and also advanced techniques and tools to build various communication systems.
- To enable graduates to attain successful professional careers by applying their engineering skills in communication system design to meet out the challenges in industries and academia.
- To engage graduates in lifelong learning, adapt emerging technology and pursue research for the development of innovative products.

**PROGRAM OUTCOMES (POs):**

The Graduate Attributes of PG programmes of the NBA are as following:

**1. Scholarship of Knowledge**

Acquire in-depth knowledge of specific discipline or professional area, including wider and global perspective, with an ability to discriminate, evaluate, analyze and synthesize existing and new knowledge, and integration of the same for enhancement of knowledge.

**2. Critical Thinking**

Analyze complex engineering problems critically, apply independent judgment for synthesizing information to make intellectual and/or creative advances for conducting research in a wider theoretical, practical and policy context.

**3. Problem Solving**

Think laterally and originally, conceptualize and solve engineering problems, evaluate a wide range of potential solutions for those problems and arrive at feasible, optimal solutions after considering public health and safety, cultural, societal and environmental factors in the core areas of expertise.

**4. Research Skill**

Extract information pertinent to unfamiliar problems through literature survey and experiments, apply appropriate research methodologies, techniques and tools, design, conduct experiments, analyze and interpret data, demonstrate higher order skill and view things in a broader perspective, contribute individually/in group(s) to the development of scientific/technological knowledge in one or more domains of engineering.

**5. Usage of modern tools**

Create, select, learn and apply appropriate techniques, resources, and modern engineering and IT tools, including prediction and modeling, to complex engineering activities with an understanding of the limitations.

**6. Collaborative and Multidisciplinary work**

Possess knowledge and understanding of group dynamics, recognize opportunities and contribute positively to collaborative-multidisciplinary scientific research, demonstrate a capacity for self-management and teamwork, decision-making based on open-mindedness, objectivity and rational analysis in order to achieve common goals and further the learning of themselves as well as others.

**7. Project Management and Finance**

Demonstrate knowledge and understanding of engineering and management principles and apply the same to one's own work, as a member and leader in a team, manage projects efficiently in respective disciplines and multidisciplinary environments after consideration of economical and financial factors.

**8. Communication**

Communicate with the engineering community, and with society at large, regarding complex engineering activities confidently and effectively, such as, being able to comprehend and write effective reports and design documentation by adhering to appropriate standards, make effective presentations, and give and receive clear instructions.

**9. Life-long Learning**

Recognize the need for, and have the preparation and ability to engage in life-long learning independently, with a high level of enthusiasm and commitment to improve knowledge and competence continuously.

**10. Ethical Practices and Social Responsibility**

Acquire professional and intellectual integrity, professional code of conduct, ethics of research and scholarship, consideration of the impact of research outcomes on professional practices and an understanding of responsibility to contribute to the community for sustainable development of society.

**11. Independent and Reflective Learning**

Observe and examine critically the outcomes of one's actions and make corrective measures subsequently, and learn from mistakes without depending on external feedback.

## PROGRAMME SPECIFIC OBJECTIVES (PSOs)

- To inculcate the ability in graduates to design and analyze the subsystems such as RF, Signal Processing, Modern communication systems and networks.
- To enhance problem solving skills in communication systems design using latest hardware and software tools.
- To apply communication engineering principles and practices for developing products for scientific and business applications.

## CATEGORY OF COURSES

- 1) **Foundation Courses (FC) Courses**
- 2) **Professional Core (PC) Courses** include the core courses relevant to the chosen programme of study.
- 3) **Employability Enhancement Courses (EEC)** includes Project Work and/or Internship, Seminar, Professional Practices, Case Study and Industrial/Practical Training.
- 4) **Professional Elective (PE) Courses** include the elective courses relevant to the chosen programme of study.
- 5) **Open Elective (OE) Courses**
- 6) **Audit Courses (AC)** are mandatory courses include Personality and Character development and the courses recommended by the regulatory bodies such as AICTE, UGC, etc.

**Total Number of credits to be earned for the award of degree: 70**

20MA102

**APPLIED MATHEMATICS FOR COMMUNICATION ENGINEERS**

L	T	P	C
4	0	0	4

**OBJECTIVES:**

The primary objective of this course is to demonstrate various analytical skills in applied mathematics and extensive experience with the tactics of problem solving and logical thinking applicable in communication engineering.

**UNIT I      LINEAR ALGEBRA      12**

Vector spaces – Norms – Inner products – Eigenvalues using QR transformations – QR factorization - Generalized eigenvectors – Canonical forms – Singular value decomposition and applications - Pseudo inverse – Least square approximations - Toeplitz matrices and some applications.

**UNIT II      LINEAR PROGRAMMING      12**

Formulation – Graphical solution – Simplex method – Big M method - Two phase method - Transportation problems - Assignment models.

**UNIT III      NUMERICAL SOLUTION OF DIFFERENTIAL EQUATIONS      12**

Initial value problems - single step methods: Picard's method - Taylor's series - Runge - Kutta method of fourth order for system of IVPs - Numerical stability of Runge - Kutta method  
Adams - Bashforth multistep method - Shooting method, BVP : Finite difference method and collocation method and orthogonal collocation method – Laplace Equations

**UNIT IV      TWO DIMENSIONAL RANDOM VARIABLES      12**

Joint distribution – Marginal and conditional distributions – Functions of two dimensional random variables – Regression curve – Correlation.

**UNIT V      QUEUEING MODELS      12**

Poisson Process – Markovian queues – Single and multi - server models – Little's formula - Machine interference model – Steady state analysis – Self service queue.

**TOTAL: 60 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C101.1	Calculate the different norms using inner product of vector space.	K3
C101.2	Solve system of linear equations by using Pseudo inverse.	K3
C101.3	Apply simplex method to solve LPP and MODI method to solve transportation.	K3
C101.4	Compute the numerical solution of initial value problem using single and multi step methods.	K3
C101.5	Calculate stastical measure and apply the concepts of correlation and regression for two dimentional random variables.	K3
C101.6	Classify the simple and multi queuing model and to calculate the statistical measures.	K4

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C101.1	K3	3	2	3							1	
C101.2	K3	3	2	3							1	
C101.3	K3	3	2	3							1	
C101.4	K3	3	2	3							1	
C101.5	K3	3	2	3							1	
C101.6	K4	3	2	3							1

20CU101

**ADVANCED RADIATION SYSTEMS**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

The course introduces the fundamental principles of antenna and to apply them to the design and analysis of antenna systems. Students will learn how to characterize antennas and how to use antennas. Different types of antennas and their applications will be introduced, with focus on linear wire antennas, loop antennas, microstrip patch antennas, antenna arrays, and the design considerations of using antennas in wireless communication systems.

**UNIT I ANTENNA FUNDAMENTALS****9**

Wave equations, radiation pattern, HPBW, FNBW, gain and directivity, polarization, equivalent circuit, radiation resistance, Radiation integrals, Radiation from surface and line current distributions – dipole, monopole, loop antenna, Antenna parameters, Image theory; Induction, reciprocity theorem, Balance to unbalance transformer, Introduction to numerical techniques.

**UNIT II RADIATION FROM APERTURES****9**

Field equivalence principle, Radiation from Rectangular and Circular apertures, Uniform aperture, distribution on an infinite ground plane; Slot antenna; Horn antenna; Reflector antenna, aperture blockage, design considerations.

**UNIT III ARRAYS****9**

Introduction-General structure of phased array, linear array theory, variation of gain as a function of pointing direction, effects of phase quantization, frequency scanned arrays, analog beamforming matrices-Active modules, digital beam forming, MEMS technology in phased arrays-Retrodirective and self phased arrays.

**UNIT IV MICRO STRIP ANTENNA****9**

Radiation mechanism from patch; Excitation techniques; Microstrip dipole; Rectangular patch, Circular patch, and Ring antenna – radiation analysis from transmission line model, cavity model; input impedance of rectangular and circular patch antenna; Microstrip array and feed network; Applications of microstrip array antenna.

**UNIT V SPECIAL ANTENNAS AND MEASUREMENTS****9**

Mobile phone antenna, base station, hand set antenna, UWB antenna, PIFA, Vivaldi antenna, Antenna for automobiles, Broadband antenna, antenna factor, Gain, impedance and radiation pattern measurements, Test sites and anechoic chamber.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C102.1	Impart knowledge about the state of art in antenna technology.	K2
C102.2	Describe the fundamentals to recent techniques in antenna technology.	K3
C102.3	Compute the antenna radiation and its parameters.	K3
C102.4	Design of monopole, dipole and patch antenna and to impart the knowledge about modern antennas.	K3
C102.5	Design and assess the performance of various antennas.	K3
C102.6	Design of modern antenna for various applications.	K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11

**MODERN DIGITAL COMMUNICATION TECHNIQUES**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

The primary objectives are understood the basics signal-space analysis and digital transmission, coherent and noncoherent receivers and its impact on different channel characteristics and equalizers.

**UNIT I COHERENT AND NON-COHERENT COMMUNICATION 9**

Coherent receivers – Optimum receivers in WGN – IQ modulation and demodulation – Noncoherent receivers in random phase channels; MFSK receivers – Rayleigh and Rician channels – Partially coherent receivers – DPSK; M-PSK; M-DPSK-BER Performance Analysis. Carrier Synchronization- Bitsynchronization.

**UNIT II EQUALIZATION TECHNIQUES 9**

Band Limited Channels - ISI – Nyquist Criterion- Controlled ISI-Partial Response signals - Equalization algorithms – Viterbi Algorithm – Linear equalizer – Decision feedback equalization – Adaptive Equalization algorithms.

**UNIT III BLOCK CODED DIGITAL COMMUNICATION 9**

Architecture and performance – Binary block codes; Orthogonal; Biorthogonal; Transorthogonal – Shannon's channel coding theorem; Channel capacity; Matched filter; Concepts of Spread spectrum communication – Coded BPSK and DPSK demodulators– Linear block codes; Hamming; Golay; Cyclic; BCH ; Reed – Solomon codes. Space time block codes.

**UNIT IV CONVOLUTIONAL CODED DIGITAL COMMUNICATION 9**

Representation of codes using Polynomial, State diagram, Tree diagram, and Trellis diagram – Decoding techniques using Maximum likelihood, Viterbi algorithm, Sequential and Threshold methods – Error probability performance for BPSK and Viterbi algorithm, Turbo Coding.

**UNIT V MULTICARRIER AND MULTIUSER COMMUNICATIONS 9**

Single vs. multicarrier modulation, orthogonal frequency division multiplexing (OFDM), Modulation and demodulation in an OFDM system, An FFT algorithmic implementation of an OFDM system, Bit and power allocation in multicarrier modulation, Peak-to-average ratio in multicarrier modulation. Introduction to CDMA systems, multiuser detection in CDMA systems – optimum multiuser receiver, suboptimum detectors, successive interference cancellation.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C103.1	Derive the BER performance analysis for various digital modulation techniques in coherent and non-coherent receivers.	K3
C103.2	Apply different Equalization techniques in digital communication systems	K3
C103.3	Develop the different block coded and convolutional coded digital communication systems.	K3
C103.4	Derive state diagram, Code tree and Trellis diagram for the representation of codes	K3
C103.5	Apply Viterbi, Maximum likelihood decoding techniques for decoding the given sequences	K3
C103.6	Explain Multicarrier and Multiuser Communications.	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C103.1	K3	3	2	1					2			
C103.2	K3	3	2	1		2			2			
C103.3	K3	3	2	3							2	
C103.4	K3	3	2	3							2	
C103.5	K3	3	2	3							2	
C103.6	K2	2	1								2

**ADVANCED DIGITAL SIGNAL PROCESSING**

20CU103

L	T	P	C
3	1	0	4

**OBJECTIVES:**

This subject focuses on mathematical description and modeling of discrete time random signals with important theorems and algorithms. Also the student can learn relevant figures of merit such as power, energy, bias and consistency and familiar with estimation, prediction and filtering techniques.

**UNIT I DISCRETE RANDOM SIGNAL PROCESSING****9+6**

Wide sense stationary process – Ergodic process – Mean – Variance - Auto-correlation and Auto-correlation matrix - Properties - Weiner Khitchine relation - Power spectral density – filtering random process, Spectral Factorization Theorem–Finite Data records, Simulation of uniformly distributed/Gaussian distributed white noise – Simulation of Sine wave mixed with Additive White Gaussian Noise.

**UNIT II SPECTRUM ESTIMATION****9+6**

Bias and Consistency of estimators - Non-Parametric methods - Correlation method - Co-variance estimator - Performance analysis of estimators – Unbiased consistent estimators - Periodogram estimator - Barlett spectrum estimation - Welch estimation.

**UNIT III SIGNAL MODELING AND PARAMETER ESTIMATION****9+6**

Model based approach - AR, MA, ARMA Signal modeling - Parameter estimation using Yule-Walker method - Maximum likelihood criterion - Efficiency of estimator - Least mean squared error criterion – Wiener filter - Discrete Wiener Hoff equations – Mean square error.

**UNIT IV LINEAR ESTIMATION AND PREDICTION****9+6**

Recursive estimators - Kalman filter - Linear prediction – Forward prediction and Backward prediction, Prediction error - Whitening filter, Inverse filter - Levinson recursion, Lattice realization, Levinson recursion algorithm for solving Toeplitz system of equations.

**UNIT V ADAPTIVE FILTER THEORY****9+6**

FIR Adaptive filters - Newton's steepest descent method - Adaptive filters based on steepest descent method - Widrow Hoff LMS Adaptive algorithm - Adaptive channel equalization - Adaptive echo canceller - Adaptive noise cancellation - RLS Adaptive filters - Exponentially weighted RLS – Sliding window RLS - Simplified IIR LMS Adaptive filter.

**TOTAL 45 + 30: 75 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C104.1	Formulate time domain and frequency domain description of Wide Sense Stationary process in terms of matrix algebra and relate to linear algebra concepts.	K3
C104.2	Derive spectrum estimation using parametric and non parametric methods	K3
C104.3	Derive linear estimation using Yule-walker method and Maximum likelihood method	K3
C104.4	Compute Efficiency and Mean square error of an estimation algorithm	K3
C104.5	Derive Adaptive algorithm for various predictors and estimators	K3
C104.6	Apply adaptive algorithm for Channel equalizers	K3

Course outcomes	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
↓ C104.1	K3	3	2	1						1	2

20RM101

**RESEARCH METHODOLOGY AND IPR**

L	T	P	C
2	0	0	2

**OBJECTIVES:**

To give an overview of the research methodology and explain the technique of defining a research problem and to explain the functions of the literature review in research. This course can explain the art of interpretation and the art of writing research reports. Also it explains various forms of the intellectual property, its relevance and business impact in the changing global business environment.

**UNIT I INTRODUCTION TO RESEARCH METHODOLOGY****6**

Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations. Effective literature studies, approaches, analysis, Plagiarism, Research ethics.

**UNIT II EFFECTIVE TECHNICAL WRITING****6**

How to write report, Paper Developing a Research Proposal, Format of research proposal, a presentation and assessment by a review committee.

**UNIT III INTELLECTUAL PROPERTY AND INTERNATIONAL SCENARIO****6**

Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.

**UNIT IV PATENT RIGHTS****6**

Scope of Patent Rights, Licensing and transfer of technology, Patent information and databases, Geographical Indications.

**UNIT V NEW DEVELOPMENTS IN IPR****6**

Administration of Patent System, New developments in IPR, IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

**TOTAL: 30 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C105.1	Explain the meaning of research problem, Sources of research problem, Scope and objectives	K2
C105.2	Analyze research related information.	K4
C105.3	Summarize the research ethics to Effective literature studies approaches, analysis and Plagiarism	K2
C105.4	Describe the format of research proposal and presentation	K2
C105.5	Describe the Nature of Intellectual Property and the process of Patents, Designs, Trade and Copyright	K2
C105.6	Discuss the Patent Rights, Scope of Patent Rights. Licensing and transfer of technology	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11

**ADVANCED COMMUNICATION SYSTEMS LABORATORY**

L	T	P	C
0	0	4	2

**OBJECTIVES:**

This course introduces the basics of microstrip patch antenna and its analysis. This study can measure the performance of digital communications systems and provide a comprehensive knowledge of wireless communication with the design of digital filter and its adaptive filtering algorithms.

**LIST OF EXPERIMENTS****USE NETWORK ANALYSER:**

1. Measurement of transmission line parameters.
2. S-parameter estimation of Microwave devices.
3. Design and testing of a Microstrip coupler.
4. Characteristics of Microstrip patch antenna.

**USE APPROPRIATE SIMULATION TOOLS:**

1. Generation and detection of binary digital modulation techniques.
2. Spread Spectrum communication system-Pseudo random binary sequence generation-Baseband DSSS.
3. Digital Filter Design.
4. Performance evaluation of simulated CDMA system.
5. Channel equalizer design (LMS, RLS).
6. Antenna Radiation Pattern measurement.

**TOTAL: 60 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C106.1	Measure and analyze various transmission line parameters.	K3
C106.2	Estimate S_Parameters of the Microwave devices	K3
C106.3	Design Microstrip patch antennas.	K3
C106.4	Implement the adaptive filtering algorithms using SCILAB/MATLAB/OCTAVE	K4
C106.5	Generate and detect digital communication signals of various modulation techniques using SCILAB/MATLAB/OCTAVE.	K5
C106.6	Analyze the digital filter characteristics	K5

Course outcomes	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
↓ C106.1	K3	3	2	1		3			2		2

C106.6	K5	3	3	2		3			2		2	

20CU201

**ADVANCED WIRELESS COMMUNICATIONS SYSTEM**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

The course introduces the concepts of MIMO diversity and spatial multiplexing. This can be useful to learn Massive MIMO system and millimeter wave communication.

**UNIT I INFORMATION THEORETIC ASPECTS OF MIMO 10**

Review of SISO fading communication channels, MIMO Channel models, Classical i.i.d. and extended channels, Frequency selective and correlated channels models, Capacity of MIMO channels, Ergodic and outage capacity, capacity bounds and influence of channel properties on the capacity.

**UNIT II MIMO DIVERSITY AND SPATIAL MULTIPLEXING 10**

Sources and types of diversity, analysis under Rayleigh fading, Diversity and channel knowledge. Alamouti space time code. MIMO spatial multiplexing: Space time receivers, ML, ZF, MMSE and Sphere decoding, BLAST receivers and Diversity multiplexing trade - off.

**UNIT III MASSIVE MIMO SYSTEM 9**

Introduction - MIMO for LTE, capacity of massive MIMO, Pilot Design for massive MIMO, Resource allocation and transceivers design, Base band and RF implementation, Channel Models.

**UNIT IV MILLIMETER WAVE COMMUNICATION 8**

Spectrum regulation, Channel propagation, Hardware technology for mmWave systems, architecture and mobility, Beam forming techniques, Beam finding, Physical layer techniques - Duplex scheme and Transmission Scheme.

**UNIT V SOFTWARE DEFINED RADIO AND COGNITIVE RADIO 8**

SDR - Definition, Origin, key characteristic, hardware and software architecture, waveforms. Cognitive Radio - Definitions, Cognitive theories, architectures, Cognitive radio as self controlling system, Ontology based cognitive radio.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C107.1	Describe and categorize various wireless MIMO channel models.	K3
C107.2	Analyze the performance of various MIMO channel models.	K4
C107.3	Compute capacity and channel model for Massive MIMO system.	K3
C107.4	Explain millimeter wave communication and its applications.	K2
C107.5	Demonstrate software defined radio.	K3
C107.6	Explain architecture and applications of Cognitive radio systems	K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11

20CU202

**MIC AND RF SYSTEM DESIGN**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

The course introduces the fundamental principles of the design of RF circuits and its analysis. Also, it can describe about the design of microstrip lines for a given set of parameters.

**UNIT I CMOS PHYSICS, TRANSCIEVER SPECIFICATIONS AND ARCHITECTURES 9**

CMOS: Introduction to MOSFET Physics, Noise: Thermal, shot, flicker, popcorn noise transceiver Specifications: Two port Noise theory, Noise Figure, THD, IP2, IP3, Sensitivity, SFDR, Phase noise. Transceiver Architectures: Receiver: Homodyne, Heterodyne, Image reject, Low IF Architectures, Transmitter: Direct up conversion, Two step up conversion schemes.

**UNIT II IMPEDANCE MATCHING AND AMPLIFIERS 9**

Review of S-parameters and Smith chart, Passive IC components, Impedance matching networks, Amplifiers: Common Gate, Common Source Amplifiers, OC Time constants in bandwidth estimation and enhancement, High frequency amplifier design, Low Noise Amplifiers: Power match and Noise match, Single ended and Differential schemes.

**UNIT III FEEDBACK SYSTEMS AND POWER AMPLIFIERS 9**

Feedback Systems: Stability of feedback systems: Gain and phase margin, Root-locus techniques, Time and Frequency domain considerations, Compensation Power Amplifiers: General model – Class A, AB, B, C, D, E and F amplifiers, Linearization Techniques, Efficiency boosting techniques, ACPR metric, Design considerations.

**UNIT IV RF FILTER , OSILLATOR, MIXER 9**

Overview-basic resonator and filter configuration, special filter realizations, filter implementation. Basic oscillator model, high frequency oscillator configuration, basic characteristics of mixers, phase locked loops, RF directional couplers, hybrid couplers, detector and demodulator circuits.

**UNIT V MIC COMPONENTS 9**

Introduction to MICs, Fabrication Technology, Advantages and applications, MIC components- Micro strip components, Coplanar circuits: Transistors, switches, active filters. Coplanar microwave amplifiers: LNA design and Medium power amplifiers.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C108.1	Discuss the fundamentals of RF design and Microwave integrated circuits.	K2
C108.2	Distinguish the various components of RF system for Wireless Communications.	K3
C108.3	Apply the basic techniques needed for the analysis of RF systems.	K3
C108.4	Describe the various types of micro strip line components.	K3
C108.5	Analyze the performance of micro strip lines using different methods.	K4
C108.6	Design lumped elements for a given set of parameters.	K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C108.1	K3	3	1	2					1		1	
C108.2	K4	3		2								
C108.3	K3	3	2	3					2		1	
C108.4	K2	3	1	2					1		1

20CU2L1

**RF SYSTEM DESIGN LABORATORY**

L	T	P	C
0	0	4	2

**OBJECTIVES:**

This course aims to provide students with the technological skills needed in the design and engineering of modern Microwave systems and subsystems. This course focuses on the design and simulation of passive and active devices for microwave applications.

**LIST OF EXPERIMENTS**

(ADS/IE3D/HFSS or any similar/ equivalent tool may be used for the design)

1. Measurement of S parameters for (a) Inductor (b) Capacitor (c) impedance matching circuits, filters using network analyzer
2. Design of  $\lambda/2$ ,  $\lambda/4$  microstrip transmission line.
3. Design of microstrip inductor and capacitor.
4. Design of impedance matching network.
5. Design of low pass, high pass, band pass and band stop filter at RF.
6. Design and characterization of microstrip patch antennas.
7. Design and characterization of LNA.
8. Design and characterization of Mixer.
9. Design and characterization of VCO.

**TOTAL: 45 PERIODS****LIST OF EQUIPMENT FOR A BATCH OF 30 STUDENTS**

- Network analyzer Equipment - 1.5 GHz (Minimum) – 1 No
- ADS/IE3D/HFSS or any similar / equivalent Electromagnetic Simulation tool for Design experiments – 10 User license
- Desktop PC's for hosting Electromagnetic simulation tool – 10 Numbers
- Inductor, Capacitor, matching circuits, filters capable of operating at 500 MHz or above

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C109.1	Analyze the S parameters of .passive devices, Matching networks and filters using Network Analyzer	K4
C109.2	Design micro strip Transmission line, inductors and capacitors	K3
C109.3	Design RF filters and impedance matching networks	K3
C109.4	Analyze and interpret the experimentally measured data and produce the meaningful conclusions.	K4
C109.5	Design micro strip patch antennas, LNA, Mixer and VCO	K3
C109.6	Analyze the performance measure using simulation tool	K4

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C109.1	K4	3	2	3	1	2			2		2	1

C109.5	K3	3	2	3					1		1	
C109.6	K4	3	2	3	1	2			2		2	1

20CU301

**MILLIMETER WAVE COMMUNICATION**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

The primary focus of this course is to introduce the design characteristics of millimeter wave communications, guiding structures and interconnects at millimeter-wave frequencies. Also, it focuses on the design of millimeter-wave fields, meta-surface antennas and low-profile antennas.

**UNIT I INTRODUCTION****9**

Millimeter wave characteristics - millimeter wave wireless, implementation challenges, Radio wave propagation for mm wave: Large scale propagation channel effects, small scale channel effects, Outdoor and Indoor channel models, Emerging applications of millimeter wave communications.

**UNIT II MM WAVE DEVICES AND CIRCUITS****9**

Millimeter wave generation and amplification: Peniotrons, Ubitrons, Gyrotrons and Free electron lasers. HEMT, models for mm wave Transistors, transistor configurations, Analog mm wave components: Amplifiers, Mixers, VCO, PLL. Metrics for analog mm wave devices, Consumption factor theory, Trends and architectures for mm wave wireless, ADC's and DAC's.

**UNIT III MM WAVE COMMUNICATION SYSTEMS****9**

Modulations for millimeter wave communications: OOK, PSK, FSK, QAM, OFDM, Millimeter wave link budget, Transceiver architecture, Transceiver without mixer, Receiver without Oscillator, Millimeter wave calibration, production and manufacture, Millimeter wave design considerations.

**UNIT IV MM WAVE MIMO SYSTEMS****9**

Massive MIMO Communications, Spatial diversity of Antenna Arrays, Multiple Antennas, Multiple Transceivers, Noise coupling in MIMO system, Potential benefits for mm wave systems, Spatial, Temporal and Frequency diversity, Dynamic spatial, frequency and modulation allocation.

**UNIT V ANTENNAS FOR MM WAVE SYSTEMS****9**

Antenna beamwidth, polarization, advanced beam steering and beam forming, mm wave design consideration, On-chip and In package mm wave antennas, Techniques to improve gain of on-chip antennas, Implementation for mm wave in adaptive antenna arrays, Device to Device communications over 5G systems, Design techniques of 5G mobile.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	Unit	K Level
C201.1	Explain the fundamentals of Millimeter wave devices and circuits.		K2
C201.2	Discuss the various components of Millimeter wave communication system.		K2
C201.3	Design antenna for Millimeter wave frequencies.		K3
C201.4	Compare the modulation techniques in Millimeter Wave Communication.		K3
C201.5	Apply the fundamental knowledge of wireless communication to MIMO scenario		K3
C201.6	Apply the fundamental concepts of multicarrier communication to design of LTE systems.		K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11

20CU1E1

**OPTICAL NETWORKS**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

This subject focuses on optical system components like optical amplifiers and wavelength converters. The study of recent developments in optical network architectures, packet switching, network design perspectives, different optical network management techniques and functions.

**UNIT I INTRODUCTION TO OPTICAL NETWORKS 9**

Telecommunications Networks Architecture, Services, circuit switching and packet switching, Optical Networks: Multiplexing Techniques, Second generation Optical Networks, Optical Packet Switching, Transmission Basics: Wavelength, frequencies, and channel spacing, Wavelength standards, Optical power and loss, Network Evolution, Nonlinear Effects: Self-phase Modulation, Cross-phase Modulation, Four Wave mixing, Solitons. Components: Couplers, Isolators and Circulators, Multiplexers and Filters, Optical Amplifiers, Transmitters, Detectors, Switches, Wavelength Converters.

**UNIT II TRANSMISSION SYSTEM ENGINEERING 9**

System Model, Power Penalty, Transmitter, Receiver, Optical Amplifiers, Crosstalk, Dispersion, Wavelength Stabilization, Overall Design Considerations. Optical Internets: Migration to IP optical networking, IP and Optical backbone, IP Routing table, MPLS and optical cross connect table, Protocol stack Alternatives, Internetworking SS7 and Legacy Transport, Internet transport network protocol stack.

**UNIT III SONET, SDH AND OPTICAL TRANSPORT NETWORKS (OTNS) 9**

SONET and SDH: SONET multiplexing hierarchy, Frame structure, Functional Component, problem detection, concatenation. Architecture of Optical Transport Networks (OTNs): Digital wrapper, in-band and out-of band control signalling, Importance of Multiplexing and multiplexing hierarchies, SONET multiplexing hierarchies, SDH multiplexing hierarchies, New Optical Transport, OTN layered Model, Generic Framing Procedure (GFP).

**UNIT IV WDM, NETWORK TOPOLOGIES, MPLS AND OPTICAL NETWORKS 9**

WDM operation, Dense Wavelength Division Multiplexing (DWDM), Erbium-doped Fiber (EDF), WDM amplifiers, Add-Drop Multiplexers, Wavelength Continuity Property, Higher dispersion for DWDM, Tunable DWDM Lasers.

**UNIT V NETWORK TOPOLOGIES AND PROTECTION SCHEMES 9**

Robust networks, Line and path protection switching, Types of topology, Point to point topology, bi-directional line-switched ring (BLSR), meshed topology, Passive optical networks, Metro optical networks

28 MPLS and Optical Networks: IS label switching, Forwarding equivalence class (FEC), Types of MPLS nodes, Label distribution and binding, label swapping and traffic forwarding, MPLS support of Virtual Private Networks (VPN), MPLS traffic engineering, Multi protocol Lambda switching (MPIS).

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C1PE1.1	Interpret functions of various optical network components.	K4
C1PE1.2	Analyze Optical internet, IP routing table ,internet transport network protocol stack.	K4
C1PE1.3	Compare different optical network architectures.	K4
C1PE1.4	Describe the methodologies of wavelength division multiplexing applied in optical networks	K3
C1PE1.5	Analyze different network management functions.	K4
C1PE1.6	Explain various types of MPLS nodes.	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE1.1	K4	3		2					2		1	
C1PE1.2	K4	3	2	3		1						
C1PE1.3	K4	3	1	2					2		1	
C1PE1.4	K3	3		2					2		1	
C1PE1.5	K4	3	1	2					2			
C1PE1.6	K2	2		2					2		2

20CU1E2

**RADAR SIGNAL PROCESSING**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

The students could understand the basic principles of radar operation and the different types of radars and their applications. They can able to understand the different systems involved in radar configuration, the signal processing aspects to accurately detect and interpret signals and the antenna systems for signal capture. Also, they become familiar with conventional applications of radar and with new techniques currently being researched and implemented.

**UNIT I RANGE EQUATION AND TYPES OF RADAR 9**

Basic Radar, Radar equation, Radar parameters, Block diagram, Radar frequencies. Types of Radar: CW, Doppler, MTI, FMCW, Pulsed, Tracking Radar. DSP in Radar (MTD1), Radar measurements.

**UNIT II RADAR SYSTEM CONCEPTS 9**

Scattering and RCS, RCS models, propagation, antennas, receivers, Different type of Noise, Noise figure, False alarm & Missed detection, Radar cross section, Transmit/Receive and Anti-Transmit/Receive Switches.

**UNIT III SIGNAL PROCESSING – I 9**

Radar Signal Processing Fundamentals – Detection and likelihood ratio, binary detection, matched filtering, radar ambiguity functions, pulse compression and radar waveforms, radar resolution, Detection of radar signals in Noise and clutter, detection of non fluctuating target in noise, Matched filter response to delayed Doppler shifted signals.

**UNIT IV SIGNAL PROCESSING – II 9**

Doppler Processing, Linear FM Pulse Compression, Waveform diversity, Passive System: Digital compression, SAW pulse compression. Signal processing in Antenna arrays.

**UNIT V APPLICATIONS OF RADAR SIGNAL PROCESSING 9**

Pulse-Doppler radar, CFAR detection, synthetic aperture radar (SAR), inverse synthetic aperture radar (ISAR), moving target indication (MTI), displaced-phase-center-antenna technique (DPCA), adaptive radar, super resolution (MUSIC), space-time adaptive processing (STAP).

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C1PE2.1	Demonstrate the basic principles of radar operation and the types.	K3
C1PE2.2	Derive Signal model, noise model and frequency models of a RADAR signal.	K3
C1PE2.3	Interpret the impact sampling and quantization of pulsed RADAR signal	K4
C1PE2.4	Design radar systems to meet user specified operational goals.	K3
C1PE2.5	Derive the RADAR signal waveforms	K3
C1PE2.6	Discuss various RADAR applications.	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE2.1	K3	3		2	1				2			
C1PE2.2	K3	3	1	2					2		1	
C1PE2.3	K4	3		3								
C1PE2.4	K3	3	1	2		1	1		2			
C1PE2.5	K3	3	1	2					2			
C1PE2.6	K2	2		1

20CU1E3

**ANALOG AND MIXED MODE VLSI DESIGN**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

The course aims at understanding the engineering and design principles of analog CMOS technology for application in analog integrated circuits and subsystems. Students will have an in-depth knowledge of basic concepts in CMOS RF design, scattering parameters, modern integrated circuit technologies, fundamental limitations of speed of operation of transistors, physics of noise, impedance matching, low-noise amplifiers, mixers, oscillators, phase noise and phase locked loops.

**UNIT I INTRODUCTION AND BASICMOSDEVICES 9**

Challenges in analog design-Mixed signal layout issues - MOS FET structures and characteristics - large signal and small signal model of single stage Amplifier - Source follower - Common gate stage – Cascode Stage – large and small signal analysis of differential amplifier with active load, pole-zero estimation, zero value time constant method, frequency response of CS, cascade and cascade amplifiers

**UNIT II SUBMICRONCIRCUITDESIGN 9**

Submicron CMOS process flow, Capacitors and resistors, Current mirrors, Digital Circuit Design, Delay Elements – Adders - OP Amp parameters and Design

**UNIT III DATA CONVERTERS 9**

Static and dynamic errors in DAC and ADC – Architectures & Characteristics of Sample and Hold - Digital to Analog Converters - DAC - R-2R, weighted DAC, multiplying DAC, segmented DAC and sigma delta DAC. ADC – Flash ADC, pipelined ADC, successive approximation ADC, sigma delta ADC

**UNIT IV SNR IN DATA CONVERTERS 9**

Overview of SNR of Data Converters - Clock Jitters - Improving Using Averaging – Decimating Filters for ADC- Band pass and High Pass Sinc Filters - Interpolating Filters for DAC

**UNIT V SWITCHEDCAPACITORCIRCUITS 9**

Resistors, First order low pass Circuit, Switched capacitor Amplifier, Switched Capacitor Integrator – Design of flip around sample and hold circuit – pipelined ADC

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C1PE3.1	Discuss the concepts of MOS large signal model and small signal model.	K2
C1PE3.2	Design of analog CMOS subcircuits including MOS switch, current sinks and sources and current mirrors.	K3
C1PE3.3	Discuss the concepts of D/A conversion methods and their architectures.	K2
C1PE3.4	Discuss the submicron circuit design.	K2
C1PE3.5	Design of CMOS single stage amplifiers, including differential amplifiers, cascade amplifiers and inverters.	K3
C1PE3.6	Design and analyze the switched capacitor circuits.	K3

Course outcomes	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
↓												
C1PE3.1	K2	3		2					2			
C1PE3.2	K3	3	1	2	1	1	1		2			
C1PE3.3	K2	3		3					2		2	
C1PE3.4	K2	3	1	2		1			2			
C1PE3.5	K3	3	2	3								
C1PE3.6	K3	3	1	3	1				1		1

20CU1E4

**REAL TIME EMBEDDED SYSTEMS**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

The course introduces the concepts of embedded systems and its real-time applications using the ARM processor, real-time operating system and embedded software design techniques. The student can learn the architecture and programming of ARM processor, embedded computing platform design and analysis. Also they learn the system design techniques and networks for embedded systems.

**UNIT I INTRODUCTION TO ARM PROCESSORS 9**

Fundamentals of ARM, ARM Instruction set, Thumb Instruction set, ARM assembly language programming, Digital Signal Processing in ARM, Exceptions & Interrupt Handling.

**UNIT II COMPUTING PLATFORM AND DESIGN ANALYSIS 9**

CPU buses – Memory devices – I/O devices – Memory Protection Units – Memory Management Units – Component interfacing – Design with microprocessors – Development and Debugging – Program design – Model of programs – Assembly and Linking – Basic compilation techniques – Analysis and optimization of execution time, power, energy, program size – Program validation and testing.

**UNIT III PROCESS AND OPERATING SYSTEMS 9**

Multiple tasks and multi processes – Processes – Context Switching – Scheduling policies - Multiprocessor – Inter Process Communication mechanisms – Evaluating operating system performance – Power optimization strategies for processes – Firmware and Operating Systems for ARM processor.

**UNIT IV HARDWARE ACCELERATORS & NETWORKS 9**

Accelerators – Accelerated system design – Distributed Embedded Architecture – Networks for Embedded Systems – Network based design – Internet enabled systems.

**UNIT V CASE STUDY 9**

Hardware and software co-design - Data Compressor - Software Modem – Personal Digital Assistants Set-Top-Box – System-on-Silicon – FOSS Tools for embedded system development.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C1PE4.1	Describe the architecture and programming of ARM processor.	K2
C1PE4.2	Explain the concepts of program level in embedded processor computing.	K2
C1PE4.3	Explain the basic concepts of real time Operating system.	K2
C1PE4.4	Use the system design techniques and networks for embedded systems.	K3
C1PE4.5	Model the real-time applications using embedded-system concepts.	K3
C1PE4.6	Conclude the case studies related to embedded systems.	K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE4.1	K2	2		1					2		2	
C1PE4.2	K2	3	1	2								
C1PE4.3	K2	3		2			1		2		2	
C1PE4.4	K3	3	2	3

20CU1E5

**MARKOV CHAIN AND QUEUING SYSTEM**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

The course introduces the concepts of key mathematical tools necessary to anticipate the performance levels of queuing systems and understand the behavior of other systems that evolve randomly over time. This course gives a good learning about how to describe a queuing system statistically, how to model the random evolution of queue lengths over time and calculate key performance indicators, such as an average delay or a loss probability.

**UNIT I INTRODUCTION TO QUEUING THEORY 9**

Introduction to Probability, Stochastic Processes and System Modeling, Markov Chains and regenerative processes, Modeling - variety of systems and phenomena. Systems model - queuing systems in aspect of the queue governed by a random process. Examples of modeling systems in telecommunication systems, manufacturing systems and computer systems.

**UNIT II NO-LOSS QUEUE 9**

System modeling using Markov chains with special emphasis on developing queueing models. Properties of nonnegative random variables, laws of large numbers and the Central Limit Theorem, Renewal Processes: Recurrence times, Rewards and Renewal reward theorem, Point processes, Poisson process, Wald's equation, Blackwell's theorem.

**UNIT III DISCRETE TIME MARKOV CHAINS 9**

Stochastic processes in discrete time, Markov chains as recursions with examples, Chapman-Kolmogorov equations and n-step transition probabilities, Examples of Discrete State Space Markov Chains, Computing the Transient Distribution, Uniqueness/Existence for First Step Analysis, Matrix and Vector Norms.

**UNIT IV CONTINUOUS TIME MARKOV CHAINS 9**

Embedded Markov processes, semi Markov processes, reversible Markov chains. Random walks. Fundamental queueing results: Little's theorem, invariance of the mean delay, Conservation law.

**UNIT V MULTISERVER AND FINITE CAPACITY QUEUES 9**

Markovian queues: Jackson and BCMP networks, numerical algorithms. M/G/1 & G/M/1 queues and G/G/1 queues; Advanced queueing models: priority, vacation and retrials in queues.

**TOTAL: 45 PERIODS****Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C1PE5.1	Characterize a queue, based on probabilistic assumptions about arrivals and service times, number of servers, buffer size and service discipline.	K3
C1PE5.2	Describe the basics of discrete time and continuous time Markov chains.	K2
C1PE5.3	Model simple queuing systems, like M/M/1 or M/M/C/C queues, as continuous time Markov chains.	K5
C1PE5.4	Compute key performance indicators, such as an average delay, a resource utilization rate, or a loss probability in discrete time markov chain processes.	K3
C1PE5.5	Design queuing simulations with the Python language to analyze continuous markov chain Processes.	K3
C1PE5.6	Solve case studies related to multi server and finite Capacity queues.	K5

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE5.1	K3	3		3						1		1
C1PE5.2	K2	3		2					2		1	
C1PE5.3	K1	3	1	3								
C1PE5.4	K3	3	2	3					2	1	2	
C1PE5.5	K3	3	2	3		2			2		2	
C1PE5.6	K5	3	3	3		3			2		2

20CU2E1

**COMMUNICATION NETWORK MODELLING AND SIMULATION**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

The course introduces the fundamental principles of the communication system which can be evaluated using formula based calculations, waveform level simulation or through hardware prototyping and measurements. Hardware prototypes are in general, costly, time-consuming and non-flexible. In the simulation based approaches, systems can be modeled with almost any level of detail desired. Further, the mathematical, measured characteristics of devices and actual signals can be combined into the analysis and design of communication systems.

**UNIT I INTRODUCTION TO MODELING AND SIMULATION 9**

Introduction, Discrete-event simulation, Modeling for computer simulation, Tools and Methods for Network Simulation, The simulation platform, Simulation Framework, Tools and Modeling approaches for Simulating Hardware.

**UNIT II MONTECARLO SIMULATION 9**

Fundamental concepts, Application to communication systems, Monte Carlo integration, Semianalytic techniques, Case study: Performance estimation of a wireless system.

**UNIT III LOWER LAYER & LINK LAYER WIRELESS MODELING 9**

Physical Layer Modeling, Description of the Main Components of the PHY Layer, Accurate Simulation of Physical Layers, Physical Layer Modeling for Network Simulations, Link Layer Modeling, Medium Access Control (MAC) Protocols, Logical Link Control, Forward Error Detection and Correction, Backward Error Detection and Correction, Queueing and Processing Delay.

**UNIT IV CHANNEL MODELING & MOBILITY MODELING 9**

Channel Modeling: The Physics of Radiation, The Nature of Electromagnetic Radiation, Classification of Propagation Models, Deterministic Approaches by Classical Field Theory, Deterministic Geometric Optical Approaches, Empirical Path Loss Approaches, Stochastic Shadowing Models, Stochastic Fading Models, MIMO Channel Models.

Mobility modeling: Categorization of Mobility Models, Mobility Models, Random Walk Model, Random Waypoint Model, Random Direction Model, Gauss-Markov Model, Manhattan Model, Column Model, Pursue Model, Nomadic Community Model, Selection of Appropriate Mobility Models.

**UNIT V HIGHER LAYER MODELING & MODELING THE NETWORK TOPOLOGY 9**

Higher Layer Modeling: Modeling the Network Layer and Routing Protocols, Components of a Routing Protocol, Metrics, Virtual Routing on Overlays, Modeling Transport Layer Protocols, Modeling Application

Traffic.

Modeling the Network Topology: Abstraction of Network Topologies by Graphs, Characterizing Graphs, Common Topology Models, Geometric Random Graphs – The Waxman Model, Hierarchical Topologies, Preferential Linking – The Barabási-Albert Model, Modeling the Internet.

**TOTAL: 45 PERIODS**

### Course Outcomes (COs):

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C1PE6.1	Discuss the basics of computer based modeling and simulation tools.	K2
C1PE6.2	Apply the Monte Carlo simulation technique in the simulation of communication systems	K3
C1PE6.3	Discuss Lower Layer and Link Layer Wireless Modeling.	K2
C1PE6.4	Compare the channel modeling and mobility modeling.	K3
C1PE6.5	Design and develop protocols for Communication Networks.	K3
C1PE6.6	Design protocols for various functions in the network.	K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE6.1	K2	3	2	3		3			2		2	
C1PE6.2	K3	3	3	3		3			2		1	
C1PE6.3	K2	3		2								
C1PE6.4	K3	3		1						1		
C1PE6.5	K3	3	1	3					2		2	
C1PE.6	K3	3		2					2		1

20CU2E2

DIGITAL COMMUNICATION RECEIVERS

L	T	P	C
3	0	0	3

OBJECTIVES:

This course introduces the fundamental principles of receiver design from analog front ends to mixed signal design and frequency synthesis with equal emphasis on theory and practical design. Also the students can acquire the design knowledge of futuristic wireless radios and modems which supports the multiple standards and modes.

**UNIT I                  REVIEW OF DIGITAL COMMUNICATION TECHNIQUES                  9**

Base band communication, signal space representation, linear and nonlinear modulation techniques, Error tracking and Spectral characteristics of digital modulation.

**UNIT II                  OPTIMUM RECEIVERS FOR AWGN CHANNEL                  9**

Correlation demodulator, matched filter, maximum likelihood sequence detector, optimum receiver for CPM signals, optimum receivers for signals with random phase in AWGN channel, envelope detection of M-ary orthogonal signals and correlated binary signals.

**UNIT III                  RECEIVERS FOR FADING CHANNELS                  9**

Characterization of fading multiple channels, statistical models, flat and frequency selective fading, diversity technique, parameter synchronization for flat fading channels, digital signaling over a frequency selective and slowly fading channel, coded waveform for fading channel.

**UNIT IV                  SYNCHRONIZATION TECHNIQUES                  9**

Carrier and signal synchronization, carrier phase estimation-PLL, Decision directed loops, symbol timing estimation, maximum likelihood and non-decision directed timing estimation, joint estimation.

**UNIT V                  ADAPTIVE EQUALIZATION                  9**

Zero forcing algorithm, LMS algorithm, adaptive decision-feedback equalizer and Equalization of Trellis-coded signals. Kalman algorithm, blind equalizers and stochastic gradient algorithm.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

Co	Course Outcomes	K Level
C1PE7.1	Discuss the spectral characteristics of digital modulation techniques.	K2
C1PE7.2	Design receivers for AWGN & Fading channel.	K3
C1PE7.3	Describe and determine the performance of different error control coding schemes for the reliable transmission of digital information over the channel.	K2
C1PE7.4	Describe various synchronization techniques.	K2
C1PE7.5	Design optimum coherent and non-coherent receiver for digital modulation schemes.	K2
C1PE7.6	Derive adaptive equalization algorithms, Kalman algorithm, blind Equalization algorithm and Stochastic Gradient algorithm.	K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE7.1	K2	3	1	2			1		2	2		
C1PE7.2	K3	3		3					2		2	
C1PE7.3	K2	3	2	3								
C1PE7.4	K2	3		2					2			
C1PE7.5	K2	3	1	3					2		2	
C1PE7.6	K3	3		2					2		1

**OBJECTIVES:**

This course introduces the basics of EMI, EMI sources, EMI problems, PCB design methodologies and measurement techniques for emission and immunity. Also, it discusses about the comparison of various EMI test methods.

**UNIT I BASIC THEORY 9**

Introduction to EMI and EMC, Intra and inter system EMI, Elements of Interference, Sources and Victims of EMI, Conducted and Radiated EMI emission and susceptibility, Case Histories, Radiation hazards to humans, Various issues of EMC, EMC Testing categories EMC Engineering Application.

**UNIT II COUPLING MECHANISM 9**

Electromagnetic field sources and Coupling paths, Coupling via the supply network, Common mode coupling, Differential mode coupling, Impedance coupling, Inductive and Capacitive coupling, Radioactive coupling, Ground loop coupling, Cable related emissions and coupling, Transient sources, Automotive transients.

**UNIT III EMI MITIGATION TECHNIQUES 9**

Working principle of Shielding and Murphy's Law, LF Magnetic shielding, Apertures and shielding effectiveness, Choice of Materials for H, E, and free space fields, Gasketing and sealing, PCB Level shielding, Principle of Grounding, Isolated grounds, Grounding strategies for Large systems, Grounding for mixed signal systems, Filter types and operation, Surge protection devices, Transient Protection.

**UNIT IV STANDARD AND REGULATION 9**

Need for Standards, Generic/General Standards for Residential and Industrial environment, Basic Standards, Product Standards, National and International EMI Standardizing Organizations; IEC, ANSI, FCC, AS/NZS, CISPR, BSI, CENELEC, ACEC. Electro Magnetic Emission and susceptibility standards and specifications, MIL461E Standards.

**UNIT V EMI TEST METHODS AND INSTRUMENTATION 9**

Fundamental considerations, EMI Shielding effectiveness tests, Open field test, TEM cell for immunity test, Shielded chamber, Shielded anechoic chamber, EMI test receivers, Spectrum analyzer, EMI test wave simulators, EMI coupling networks, Line impedance stabilization networks, Feed through capacitors, Antennas, Current probes, MIL -STD test methods, Civilian STD test methods.

**TOTAL: 45 PERIODS****Course Outcomes (COs):**

**After completing this course, students should demonstrate competency in the following skills:**

CO	Course Outcomes	K Level
C1PE8.1	Explain the basic principles of EMI/EMC.	K2
C1PE8.2	Discuss various EMI coupling methods.	K2
C1PE8.3	Compare various EMI/EMC standards.	K4
C1PE8.4	Explain the various isolation, grounding and shielding techniques to minimize EMI effects.	K2
C1PE8.5	Design the printed circuit board traces and layouts with minimum crosstalk.	K3
C1PE8.6	Discuss the various EMI mitigation techniques.	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11

**OBJECTIVES:**

The main purpose of this course is to introduce the emerging areas of cooperative communication and cognitive radio communication. This will enable the students to acquire a solid understanding of different cooperative protocols in wireless communication and compressive sensing in communication engineering problems. Also the students can learn about spectrum sensing, spectrum decision and spectrum sharing in cognitive radio networks.

**UNIT I INTRODUCTION TO SOFTWARE DEFINED RADIO AND COGNITIVE RADIO 9**

Evolution of Software Defined Radio and Cognitive radio: goals, benefits, definitions, architectures, relations with other radios, issues, enabling technologies, radio frequency spectrum and regulations.

**UNIT II COGNITIVE RADIO ARCHITECTURE 9**

Cognitive Radio – functions, components and design rules, Cognition cycle – orient, plan, decide and act phases, Inference Hierarchy, Architecture maps, Building the Cognitive Radio Architecture on Software defined Radio Architecture, Overview of IEEE 802.22 standard for broadband wireless access in TV bands.

**UNIT III SPECTRUM SENSING AND DYNAMIC SPECTRUM ACCESS 9**

Introduction – Primary user detection techniques – energy detection, feature detection, matched filtering, cooperative detection, Bayesian Approach, Neyman Pearson fusion rule for spectrum sensing, Optimum spectrum sensing - Kullback Leibler Divergence and other approaches, Fundamental Tradeoffs in spectrum sensing, Spectrum Sharing Models of Dynamic Spectrum Access - Unlicensed and Licensed Spectrum Sharing, Fundamental Limits of Cognitive Radio.

**UNIT IV MAC AND NETWORK LAYER DESIGN FOR COGNITIVE RADIO 9**

MAC for cognitive radios – Multichannel MAC - slotted ALOHA – CSMA, Network layer design – routing in cognitive radios, flow control and error control techniques.

**UNIT V ADVANCED TOPICS IN COGNITIVE RADIO 9**

Cognitive radio for Internet of Things - Features and applications – Enabling technologies and protocols – M2M technologies - Data storage and analysis techniques - Requirement and challenges of IoT – Energy efficiency– MIMO Cognitive Radio – Power allocation algorithms.

**TOTAL: 45 PERIODS****Course Outcomes (COs):**

**After completing this course, students should demonstrate competency in the following skills:**

CO	Course Outcomes	K Level
C1PE10.1	Describe the evolution of software defined radios and Cognitive radios	K2
C1PE10.2	Build the blocks of Cognitive radio architecture	K3
C1PE10.3	Apply the signal processing fundamentals in Spectrum sensing and dynamic spectrum allocation	K3
C1PE10.4	Compare MAC and network layer design for cognitive radio.	K4
C1PE10.5	Explain the concepts behind the wireless networks and next generation networks.	K2
C1PE10.6	Discuss cognitive radio for the Internet of Things and M2M technologies.	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE10.1	K2	2		2								
C1PE10.2	K3	3		1					2		1	
C1PE10.3	K3	3	2	3					2		2	
C1PE10.4	K4	3	1	3					2		1	
C1PE10.5	K2	2		1			1		2			
C1PE10.6	K2	3		2					1		1

**OBJECTIVES:**

This course introduces the fundamental principles of the antenna radiation characteristics and arrays. It can provide various antenna design techniques with practical applications and assess the performance of various antennas.

**UNIT I ANTENNA FUNDAMENTALS AND ARRAYS 9**

Review of Electromagnetic Wave equations, Radiation integrals, Radiation from surface and line current distributions – dipole, monopole, loop antenna, Antenna parameters, linear array theory, frequency scanned arrays, phased arrays- Retro directive and self-phased arrays. Introduction to numerical techniques.

**UNIT II MICRO STRIP ANTENNA 9**

Radiation Mechanism from patch; transmission line model based analysis, cavity model, Excitation techniques; Microstrip dipole; Rectangular patch, Circular patch, Microstrip Yagi antenna, Microstrip array, Gain improvement techniques in microstrip antenna.

**UNIT III APERTURES AND REFLECTOR ANTENNAS 9**

Field equivalence principle, Radiation from Rectangular and Circular apertures, Uniform aperture distribution on an infinite ground plane, Babinet's principle, Slot antenna; Horn antenna; Reflector antenna, aperture blockage, and design consideration, Design of C band and Ku band reflector antenna.

**UNIT IV MODERN ANTENNA STRUCTURES 9**

Frequency independent antenna, spiral antenna, active antenna, dielectric antenna, Leaky wave antenna, Plasma antenna, wearable antenna, reconfigurable antenna, meta material, EBG antenna, Frequency selective structures, Broadband and multi-band antenna, Antenna for cellular base stations, MIMO antennas.

**UNIT V ANTENNA FOR SPECIAL APPLICATIONS 9**

Antenna for EMI/EMC testing, Antenna for EM issues in medical diagnosis and treatment, Antenna for MRI systems, Antenna for 60 GHz applications, RFID antenna, Antenna for wireless charging systems, Antenna for automobile radar, Terahertz antennas, antenna for sensor applications.

**TOTAL: 45 PERIODS****Course Outcomes (COs):**

**After completing this course, students should demonstrate competency in the following skills:**

CO	Course Outcomes	K Level
C1PE11.1	Compare the different design and performance parameters of antenna.	K4
C1PE11.2	Design microstrip antennas for wireless applications	K3
C1PE11.3	Analyze the radiation pattern of Apertures and reflectors antennas	K4
C1PE11.4	Design C and Ku band antennas	K3
C1PE11.5	Discuss various modern antenna structures	K2
C1PE11.6	Summarize the antenna for various industrial, medical and sensor applications.	K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE11.1	K4	3	2	3			2		2		2

20CU3E3

SPEECH PROCESSING AND SYNTHESIS

L	T	P	C
3	0	0	3

**OBJECTIVES:**

This course introduces the speech production and its related parameters of speech. It illustrates the concepts of speech signal representations and coding and different speech modeling procedures such as Markov and their implementation issues. Also, the students can gain knowledge about text analysis and speech synthesis.

<b>UNIT I</b>	<b>FUNDAMENTALS OF SPEECH PROCESSING</b>	<b>9</b>
Introduction – Spoken Language Structure – Phonetics and Phonology – Syllables and Words – Syntax and Semantics – Probability, Statistics and Information Theory – Probability Theory – Estimation Theory – Significance Testing – Information Theory.		
<b>UNIT II</b>	<b>SPEECH SIGNAL REPRESENTATIONS AND CODING</b>	<b>9</b>
Overview of Digital Signal Processing – Speech Signal Representations – Short time Fourier Analysis, Acoustic Model of Speech Production – Linear Predictive Coding – Cepstral Processing – Formant Frequencies – The Role of Pitch – Speech Coding – LPC Coder, CELP, Vocoders.		
<b>UNIT III</b>	<b>SPEECH RECOGNITION</b>	<b>9</b>
Hidden Markov Models – Definition – Continuous and Discontinuous HMMs – Practical Issues – Limitations. Acoustic Modeling – Variability in the Speech Signal – Extracting Features – Phonetic Modeling – Adaptive Techniques – Confidence Measures – Other Techniques.		
<b>UNIT IV</b>	<b>TEXT ANALYSIS</b>	<b>9</b>
Lexicon – Document Structure Detection – Text Normalization – Linguistic Analysis – Homograph Disambiguation – Morphological Analysis – Letter-to-sound Conversion – Prosody – Generation schematic – Speaking Style – Symbolic Prosody – Duration Assignment – Pitch Generation.		
<b>UNIT V</b>	<b>SPEECH SYNTHESIS</b>	<b>9</b>
Attributes – Formant Speech Synthesis – Concatenative Speech Synthesis – Prosodic Modification of Speech – Source-filter Models for Prosody Modification – Evaluation of TTS Systems.		
		<b>TOTAL: 45 PERIODS</b>

**Course Outcomes (COs):**

**After completing this course, students should demonstrate competency in the following skills:**

CO	Course Outcomes	K Level
C1PE13.1	Illustrate the mechanism and model of speech production.	K3
C1PE13.2	Represent speech signal in time domain frequency domain	K3
C1PE13.3	Explain various coding techniques used for speech processing.	K2
C1PE13.4	Analyze speech signals and extract its features.	K4
C1PE13.5	Design a speech recognition system with text analysis	K4
C1PE13.6	Apply various algorithms for speech synthesis	K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE13.1	K3	3	2	3					2		1	
C1PE13.2	K3	2		1								
C1PE13.3	K2	2		1					2		2	
C1PE13.4	K4	3	1	2					1		1	
C1PE13.5	K4	3	2	3					2		2

ADVANCED WIRELESS NETWORKS

L	T	P	C
3	0	0	3

**OBJECTIVES:**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C1PE14.1	Analyze the advanced wireless network, LTE, 4G and Evolutions from LTE to LTE.	K4
C1PE14.2	Discuss the wireless IP architecture, Packet Data Protocol and LTE network architecture.	K2
C1PE14.3	Develop the algorithm for the protocols for the adaptive link layer, hybrid ARQ and graphs routing protocol.	K3
C1PE14.4	Explain the mobility management, cellular network and micro cellular networks.	K2
C1PE14.5	Discuss about the wireless sensor network architecture and itsconcept.	K2
C1PE14.6	Explain the wireless medium access, wireless security, power saving mechanisms, routing Algorithm and QoS in wireless communication networks.	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE14.1	K4	3	2	3					2		1	
C1PE14.2	K2	3		2			1		2	1	2	
C1PE14.3	K3	3	2	3					2		2	
C1PE14.4	K2	3		2					1		1

**OBJECTIVES:**

This course introduces a comprehensive overview of the latest research and standardization progress towards the 5th generation (5G) of mobile communications technology and beyond. It covers a wide range of topics from 5G use cases and their requirements, to spectrum, 5G end-to-end (E2E) system architecture, including core network (CN), transport network (TN) and radio access network (RAN) architecture, network slicing, security and network management.

**UNIT I INTRODUCTION 9**

Rationale of 5G: high data volume, twenty-five billion connected devices and wide requirements - 10 pillars of 5G-Requirements and key performance indicators. 5G system concept overview, Extreme mobile broadband Massive machine-type communication Ultra-reliable machine-type communication – Dynamic radio access network 3- Lean system control plane - Localized contents and traffic flows – Spectrum toolbox -The 5G architecture -High-level requirements for the 5G architecture.

**UNIT II MACHINE-TYPE COMMUNICATIONS 9**

Introduction - Use cases and categorization of MTC - MTC requirements -Fundamental techniques for MTC- Data and control for short packets -Non-orthogonal access protocols - Massive MTC – Design principles - Technology components - Summary of MTC features - Ultra-reliable low-latency MTC - Design principles- Technology components.

**UNIT III SMALL CELLS FOR 5G MOBILE NETWORKS 9**

Introduction- Small Cells - WiFi and Femto cells as Candidate SmallCell Technologies – WiFi and Femto Performance – Indoors vs Outdoors -Capacity Limits and Achievable Gains with Densification -Gains with Multi-Antenna Techniques -Gains with Small Cells - Mobile Data Demand - Approach and Methodology - Demand vs Capacity - Small-Cell Challenges.

**UNIT IV THE 5G RADIO-ACCESS TECHNOLOGIES 9**

Access design principles for multi-user communications-Orthogonal multiple-access systems – Spread spectrum multiple-access systems -Capacity limits of multiple-access methods - Multi-carrier with filtering:a new waveform - Filter-bank based multi-carrier - Universal filtered OFDM - Non-orthogonal schemes for efficient multiple access - Non-orthogonal multiple access (NOMA) -Sparse code multiple access (SCMA) -Interleave division multiple access (IDMA) - Radio access for dense deployments - OFDM numerology for small-cell deployments - Small-cell sub-frame structure - Radio access for V2X communication – Medium access control for nodes on the move - Radio access for massive machine-type communication – The massive access problem -Extending access reservation -Direct random access.

**UNIT V SECURITY FOR 5G COMMUNICATIONS****9**

Overview of a Potential 5G Communications System Architecture -Security Issues and Challenges in 5G Communications Systems - User Equipment - Access Networks -Mobile Operator's Core Network – External IP Networks, SON Evolution for 5G Mobile Networks -SON in UMTS and LTE -The Need for SON in 5G -Evolution towards Small-Cell Dominant HetNets -Towards a New SON Architecture for 5G.

**TOTAL: 45 PERIODS****Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C1PE15.1	Explain the key features of the 5th Generation (5G) mobile networks and discussing the motivation for 5G.	K5
C1PE15.2	Analyze the new 5G system technology, paving the path towards future research and development with main challenges in developing this new technology.	K5
C1PE15.3	Categorize Machine type communication.	K3
C1PE15.4	Summarize the Machine type communication.	K3
C1PE15.5	Derive Capacity limit and Gain for Small cells for 5G.	K5
C1PE15.6	Apply the fundamental knowledge of wireless communication in the development of 5G radio access technologies.	K5

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE15.1	K5	3		2					2		2	
C1PE15.2	K5	3	2	3					2		2	
C1PE15.3	K3	3		2					1		1	
C1PE15.4	K3	3		1			2		2		2	
C1PE15.5	K5	3		2					2		1	
C1PE15.6	K5	3	1	3					2		2

20CU4E1

**WAVELET TRANSFORMS AND ITS APPLICATIONS**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

This course provides the detailed knowledge about the Wavelet transforms and its applications. Also, it gives expose the students to the basics of wavelet theory and to illustrate the use of wavelet processing for data compression and noise suppression.

**UNIT I INTRODUCTION TO WAVELETS 9**

Introduction to Multirate signal processing- Decimation and Interpolation, Quadrature Mirror Filters, Subband coding, Limitations of Fourier transform, Short time Fourier transform and its drawbacks, Continuous Wavelet transform, Time frequency representation, Wavelet System and its characteristics, Orthogonal and Orthonormal functions and function space.

**UNIT II MULTIREOLUTION CONCEPT AND DISCRETE WAVELET TRANSFORM 9**

Multiresolution formulation of wavelet systems- signal spaces, scaling function, wavelet function and its properties, Multiresolution analysis, Haar scaling and wavelet function, Filter banks-Analysis and Synthesis, 1D and 2D Discrete wavelet transform, Wavelet Packets, Tree structured filterbank, Multichannel filter bank, Undecimated wavelet transform.

**UNIT III WAVELETSYSTEM DESIGN 9**

Refinement relation for orthogonal wavelet systems, Restrictions on filter coefficients, Design of Daubechies orthogonal wavelet system coefficients, Design of Coiflet and Symlet wavelets.

**UNIT IV WAVELET FAMILIES 9**

Continuous Wavelets- Properties of Mexican hat wavelet, Morlet, Gaussian and Meyer wavelets. Orthogonal wavelets- Properties of Haar wavelets, Daubechies wavelets, Symlets, Coiflets and Discrete Meyer wavelets. Properties of Biorthogonal wavelets, Applications of wavelet families.

**UNIT V WAVELET APPLICATIONS 9**

Denoising of Signals and Images, Image enhancement, Edge detection, Image Fusion,Image compression, Wavelet based feature extraction, Analysis of phonocardiogram signals, Analysis of EEG signals, Speech enhancement for hearing aids.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C1PE16.1	Apply the fundamental knowledge of Fourier transform to find wavelet transform.	K3
C1PE16.2	Examine the convergence of signals in Hilbert and Fourier signal spaces.	K3
C1PE16.3	Analyze signals using Multi Resolution formulation.	K4
C1PE16.4	Apply wavelet transform for image processing.	K3
C1PE16.5	Explain the principle of non-linear wavelets.	K2
C1PE16.6	Assess the different family of wavelets for real-time applications.	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE16.1	K3	3	2	3					1		1	
C1PE16.2	K3	3	2	2					1		1	1
C1PE16.3	K4	3	2	3			1		1		1	1
C1PE16.4	K3	3	2	3					1		1	
C1PE16.5	K2	3		2					2		1	
C1PE16.6	K2	3	2	2			1		2		2	1

20CU4E2

**SOFTWARE DEFINED RADIO**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

This course presents the state-of-the-art in the field of Software Defined Radio Systems. The course will enable the students to learn about the architecture, design methodologies and spectrum sensing techniques used in Software Defined Radio Systems. It provides the capability to build an experiment with real wireless waveform and applications, accessing both PHY and MAC.

**UNIT I INTRODUCTION AND CASE STUDIES 9**

Introduction to software Radio concepts: Need for software Radios, Definition of software Radio, Characteristics and Benefits. Design Principles. Case studies: SPEAK easy, JTRS, SDR-3000.

**UNIT II RADIO FREQUENCY IMPLEMENTATION 9**

The purpose of the RF Front End, Dynamic Range, RF receivers front end Topologies, Importance of the components to Overall performance, Transmitter Architecture, Noise and Distortion in the RF Chain, ADC and DAC Distortion, Flexible RF systems using MEMS.

**UNIT III MULTIRATE SIGNAL PROCESSING AND DIGITAL GENERATION OF SIGNALS 9**

Sample rate conversion principles, Digital filter Banks, Timing recovery in Digital Receivers using Multirate Digital filters, Approaches to Direct Digital Synthesis, Analysis of spurious signal bandpass signal generation, Generation of random sequences.

**UNIT IV DATA CONVERTERS AND SMART ANTENNAS 9**

Parameters of Ideal and practical data converters, Techniques to Improve Data Converter performance, Common ADC and DAC Architectures, Smart Antennas- Hardware implementation of Smart Antennas.

**UNIT V DIGITAL HARDWARE AND SOFTWARE CHOICES 9**

DSP Processors, FPGA, ASICs, Tradeoffs, Object oriented programming, Object Brokers, GNU Radio, USRP.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
<b>C1PE17.1</b>	<b>Solve case studies related to SDR.</b>	K4
<b>C1PE17.2</b>	<b>Implement the RF front end receiver components</b>	K3
<b>C1PE17.3</b>	<b>Analyze the output spectrum of decimators and interpolators</b>	K4
<b>C1PE17.4</b>	<b>Analyze the spurious band pass signal</b>	K4
<b>C1PE17.5</b>	<b>Implement data converters and smart antennas</b>	K3
<b>C1PE17.6</b>	<b>Discuss the digital hardware and software choices for SDR.</b>	K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11

20CU4E3

**SPACE TIME WIRELESS COMMUNICATION**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

This course describes and categorizes the various wireless MIMO channel models. With the performance analysis. It can provide different spatial diversity techniques and explain various ST coding techniques for MIMO systems. It can analyze and evaluate advanced signal processing techniques for wireless communications.

**UNIT I MULTIPLE ANTENNA PROPAGATION AND ST CHANNEL CHARACTERIZATION 9**

Wireless channel, Scattering model in macrocells, Channel as a ST random field, Scattering functions, Polarization and field diverse channels, Antenna array topology, Degenerate channels, reciprocity and its implications, Channel definitions, Physical scattering model, Extended channel models, Channel measurements, sampled signal model, ST multiuser and ST interference channels, ST channel estimation.

**UNIT II CAPACITY OF MULTIPLE ANTENNA CHANNELS 8**

Capacity of frequency flat deterministic MIMO channel: Channel unknown to the transmitter, Channel known to the transmitter, capacity of random MIMO channels, Influence of Ricean fading, fading correlation, XPD and degeneracy on MIMO capacity, Capacity of frequency selective MIMO channels.

**UNIT III SPATIAL DIVERSITY 8**

Diversity gain, Receive antenna diversity, Transmit antenna diversity, Diversity order and channel variability, Diversity performance in extended channels, Combined space and path diversity, Indirect transmit diversity, Diversity of a space-time-frequency selective fading channel.

**UNIT IV MULTIPLE ANTENNA CODING AND RECEIVERS 10**

Coding and interleaving architecture, ST coding for frequency flat channels, ST coding for frequency selective channels, Receivers (SISO, SIMO, MIMO), Iterative MIMO receivers, Exploiting channel knowledge at the transmitter: linear pre-filtering, optimal pre-filtering for maximum rate, optimal pre-filtering for error rate minimization, selection at the transmitter, Exploiting imperfect channel knowledge.

**UNIT V ST OFDM, SPREAD SPECTRUM AND MIMO MULTI USER DETECTION 10**

SISO-OFDM modulation, MIMO-OFDM modulation, Signaling and receivers for MIMO OFDM, SISO-SS modulation, MIMO-SS modulation, Signaling and receivers for MIMO-SS. MIMO-MAC, MIMO-BC, Outage performance for MIMO-MU, MIMO-MU with OFDM, CDMA and multiple antennas.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C1PE18.1	Characterize the Space time channel for wireless applications.	K2
C1PE18.2	Derive the channel capacity for various MIMO channels.	K3
C1PE18.3	Design and evaluate the receiver and transmitter diversity techniques.	K3
C1PE18.4	Compute the transmission and decoding algorithms associated with wireless communications.	K3
C1PE18.5	Explain the multiple-antenna systems such as multiple-input multiple-output (MIMO) and Space-TimeCodes.	K2
C1PE18.6	Design and develop the OFDM based MIMO systems.	K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE18.1	K2	2		1					1		1

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course outcomes	K Level
C1PE19.1	Explain the supervised and unsupervised classifiers to problems in computer vision, speech recognition, data mining, statistics and information retrieval.	K2
C1PE19.2	Derive the ML, Bayesian and parametric estimation algorithms for pattern	K3
C1PE19.3	Apply the concept of clustering algorithm for the given image	K3
C1PE19.4	Utilize the given data set to extract and select features for pattern recognition.	K3
C1PE19.5	Use decision tree algorithm and concept learning for classification problems	K3
C1PE19.6	Discuss on recent advances in pattern recognition. K	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE19.1	K2	2		2					2		2	
C1PE19.2	K3	2		1								
C1PE19.3	K3	3	2	3	1		1					1
C1PE19.4	K3	3		2	1				1		1	
C1PE19.5	K3	3	1	2					2		1	
C1PE19.6	K2	2		1

**VIRTUAL REALITY SYSTEMS**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

This course introduces the basics of Virtual Reality (VR) and its different applications, the psychology of Virtual Reality and the challenges of the medium. This course explains the Mobile VR as well as devices such as the Oculus Rift and HTC Vive. A learner with no previous experience in Virtual Reality and/or game programming will be able to evaluate existing VR applications, and design, test, and implement their own VR experience/games using Unity by the end of the specialization.

**UNIT I VIRTUAL REALITY AND VIRTUAL ENVIRONMENTS 7**

The historical development of VR: Scientific landmarks Computer Graphics, Real-time computer graphics, Flight simulation, Virtual environments, Requirements for VR, benefits of Virtual reality.

**UNIT II HARDWARE TECHNOLOGIES FOR 3D USER INTERFACES 10**

Visual Displays Auditory Displays, Haptic Displays, Choosing Output Devices for 3D User Interfaces. Input device characteristics, Desktop input devices, Tracking Devices, 3D Mice, Special Purpose Input Devices, Direct Human Input, Home - Brewed Input Devices, Choosing Input Devices for 3D Interfaces.

**UNIT III SOFTWARE TECHNOLOGIES 10**

Database - World Space, World Coordinate, World Environment, Objects - Geometry, Position / Orientation, Hierarchy, Bounding Volume, Scripts and other attributes, VR Environment - VR Database, Tessellated Data, LODs, Cullers and Occluders, Lights and Cameras, Scripts, Interaction - Simple, Feedback, Graphical User Interface, Control Panel, 2D Controls, Hardware Controls, Room / Stage / Area Descriptions, World Authoring and Playback, VR toolkits, Available software in the market.

**UNIT IV 3D INTERACTION TECHNIQUES 9**

3D Manipulation tasks, Manipulation Techniques and Input Devices, Interaction Techniques for 3D Manipulation, Design Guidelines - 3D Travel Tasks, Travel Techniques, Design Guidelines - Theoretical Foundations of Wayfinding, User Centered Wayfinding Support, Environment Centered Wayfinding Support, Evaluating Wayfinding Aids, Design Guidelines - System Control, Classification, Graphical Menus, Voice Commands, Gestural Commands, Tools, Multimodal System Control Techniques, Design Guidelines, Case Study: Mixing System Control Methods, Symbolic Input Tasks, symbolic Input Techniques, Design Guidelines, Beyond Text and Number entry.

**UNIT V ADVANCES IN 3D USER INTERFACES 9**

Strategies for Designing and Developing of 3D User Interfaces, Guidelines and Evaluation of 3D User Interfaces, 3D User Interfaces for the Real World, AR Interfaces as 3D Data Browsers, 3D Augmented

Reality Interfaces, Augmented Surfaces and Tangible Interfaces, Agents in AR, Transitional AR-VR Interfaces - The future of 3D User Interfaces, Questions of 3D UI Technology, 3D Interaction Techniques, 3D UI Design and Development, 3D UI Evaluation and Other Issues. Applications in Engineering, Architecture, Education, Medicine, Entertainment, Science and Training.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

**After completing this course, students should demonstrate competency in the following skills:**

CO	Course Outcome	K Level
C1PE20.1	Differentiate between Virtual, Mixed and Augmented Reality platforms.	K4
C1PE20.2	Discuss the fundamental techniques, processes, technologies and equipment used in immersive virtual reality.	K2
C1PE20.3	Identify the hardware devices used for 3D user interfaces.	K2
C1PE20.4	Discuss about the Software technologies and processes used in immersive virtual reality.	K2
C1PE20.5	Categorize the benefits/shortcomings of 3D interfacing techniques.	K4
C1PE20.6	Explain the advances, strategies, guidelines and evaluation in 3D interfaces.	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE20.1	K4	3	2	3					1		1	
C1PE20.2	K2	2		1								
C1PE20.3	K2	3	1	2					1		1	
C1PE20.4	K2	2		1			1					
C1PE20.5	K4	3		2	1		1		2		2

20CU5E1

**NETWORK ROUTING ALGORITHMS**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

This course provides the exposure to the layered architecture for communication networks and the specific functionality of the network layer. It focuses the basic principles of routing and implementation of conventional networks. It can evolve routing algorithms based on internetworking requirements, optical backbone and the wireless access part of the network. The student can understand the different routing algorithms existing and their performance characteristics.

**UNIT I INTRODUCTION 7**

ISO OSI Layer Architecture, TCP/IP Layer Architecture, Functions of Network layer, General Classification of routing, Routing in telephone networks, Dynamic Non-hierarchical Routing (DNHR), Trunk status map routing (TSMR), real-time network routing (RTNR), Distance vector routing, Link state routing, Hierarchical routing.

**UNIT II INTERNET ROUTING 10**

Interior protocol: Routing Information Protocol (RIP), Open Shortest Path First (OSPF), Bellman Ford Distance Vector Routing. Exterior Routing Protocols: Exterior Gateway Protocol (EGP) and Border Gateway Protocol (BGP). Multicast Routing: Pros and Cons of Multicast and Multiple Unicast Routing, Distance Vector Multicast Routing Protocol (DVMRP), Multicast Open Shortest Path First (MOSPF), MBONE, Core Based Tree Routing.

**UNIT III ROUTING IN OPTICAL WDM NETWORKS 10**

Classification of RWA algorithms, RWA algorithms, Fairness and Admission Control, Distributed Control Protocols, Permanent Routing and Wavelength Requirements, Wavelength Rerouting- Benefits and Issues, Lightpath Migration, Rerouting Schemes, Algorithms- AG, MWPG.

**UNIT IV MOBILE -IP NETWORKS 9**

Macro-mobility Protocols, Micro-mobility Protocol, Tunnel based: Hierarchical Mobile IP, Intra domain Mobility Management, Routing based: Cellular IP, Handoff Wireless Access Internet Infrastructure (HAWAII).

**UNIT V MOBILE AD-HOC NETWORKS 9**

Internet-based mobile ad-hoc networking communication strategies, Routing algorithms – Proactive routing: destination sequenced Distance Vector Routing, Reactive routing: Dynamic Source Routing (DSR), Ad hoc On-Demand Distance Vector Routing, Hybrid Routing: Zone Based Routing (ZRP).

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C1PE21.1	Compare and analyze the various network routing algorithms.	K4
C1PE21.2	Discuss about interior and exterior routing protocols.	K2
C1PE21.3	Explain the routing algorithms for optical WDM Networks.	K2
C1PE21.4	Elaborate Mobile IP network and its protocol	K3
C1PE21.5	Analyze routing algorithm for mobile Adhoc-network.	K4
C1PE21.6	Design a new algorithm or modify an existing algorithm for the user applications in AdHoc networks.	K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE21.1	K4	3	2	3					1		1	
C1PE21.2	K2	2		1								
C1PE21.3	K2	2		2								
C1PE21.4	K3	3	1	2					2		2	
C1PE21.5	K4	3	2	2	1				1		1	1
C1PE21.6	K3	3	2	3	2							2

20CU5E2

**MACHINE LEARNING IN COMMUNICATION NETWORKS**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

The students could understand the concept of machine learning and its application in wireless communication and bio-medical engineering. They can be able to familiar with a set of well-known supervised, semi-supervised and unsupervised learning algorithms.

**UNIT I MATHEMATICAL BACKGROUND 9**

Linear Algebra – Arithmetic of matrices, Norms, Eigen decomposition, Singular value decomposition, Pseudo inverse, Principal Component analysis. Probability theory – probability distribution, conditional probability, Chain rule, Bayes rule, Information theory, Structured Probabilistic models.

**UNIT II MACHINE LEARNING BASICS 9**

Supervised and Unsupervised learning, Capacity, Overfitting and Underfitting, Cross Validation, Linear regression, Logistic Regression, Regularization, Naive Bayes, Support Vector Machines (SVM), Decision tree, Random forest, K-Means Clustering, k nearest neighbor.

**UNIT III NEURAL NETWORKS 9**

Feedforward Networks, Backpropagation, Convolutional Neural Networks-LeNet, AlexNet, ZF-Net, VGGNet, GoogLeNet, ResNet, Visualizing Convolutional Neural Networks, Guided Backpropagation, Deep Dream, Deep Art, Fooling Convolutional Neural Networks. Recurrent Neural Network(RNN) – Backpropagation through time (BPTT), Vanishing and Exploding Gradients.

**UNIT IV ML IN WIRELESS AND SECURITY 9**

Water-filling power allocation, Optimization for MIMO Systems, OFDM Systems and MIMO-OFDM systems. Optimization in beamformer design – Robust receive beamforming, Transmit downlink beamforming. Application: Radar for target detection, Array Processing, MUSIC, ML in Side channel analysis.

**UNIT V ML IN BIO-MEDICAL 9**

Machine Learning in Medical Imaging. Deep Learning for Health Informatics. Deep Learning Automated ECG Noise Detection and Classification System for Unsupervised Healthcare Monitoring. Techniques for Electronic Health Record (EHR) Analysis.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C1PE22.1	Demonstrate the mathematical principles underlying machine learning.	K2
C1PE22.2	Distinguish regression and classification problems	K4
C1PE22.3	Derive back propagation algorithm, for basic neural networks, CNN and RNN	K3
C1PE22.4	Apply the fundamental knowledge of machine learning in optimization on designing MIMO OFDM and Beam forming networks	K3
C1PE22.5	Apply the fundamental knowledge of machine learning in RADAR Target detection, Array processing, MUSIC	K3
C1PE22.6	Formulate the solutions for bio-medical issues through the deep learning techniques.	K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE22.1	K2	2		1								
C1PE22.2	K4	2		1					1		1	
C1PE22.3	K3	3	2	2	1				2		2	
C1PE22.4	K3	3	2	3					2		2	1
C1PE22.5	K3	3	2	3					2		2	1
C1PE22.6	K3	3	1	2	1		1

20CU5E3

**MULTIMEDIA COMPRESSION TECHNIQUES**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

This course introduces the basic ideas of compression algorithms related to multimedia components such as text, speech, audio, image and video. It gives exposure to the multimedia principles, standards and applications with an emphasis on the underlying technologies, algorithms, and performance. It also analyzes the different approaches of compression algorithms in multimedia related mini projects.

**UNIT I FUNDAMENTALS OF COMPRESSION 9**

Introduction To multimedia – Graphics, Image and Video representations – Fundamental concepts of video, digital audio – Storage requirements of multimedia applications – Need for compression – Taxonomy of compression Algorithms - Elements of Information Theory Error Free Compression – Lossy Compression.

**UNIT II TEXT COMPRESSION 9**

Huffman coding – Adaptive Huffman coding – Arithmetic coding – Shannon-Fano coding, Dictionary techniques – LZW family algorithms.

**UNIT III IMAGE COMPRESSION 9**

Image Compression: Fundamentals - Compression Standards – JPEG Standard – Sub-band coding – Wavelet Based compression – Implementation using Filters – EZW, SPIHT coders – JPEG 2000 standards – JBIG and JBIG2 standards.

**UNIT IV AUDIO COMPRESSION 9**

Audio compression Techniques – law, A-Law companding – Frequency domain and filtering – Basic sub-band coding – Application to speech coding – G.722 – MPEG audio – progressive encoding – Silence compression, Speech compression – Formant and CELP vocoders.

**UNIT V VIDEO COMPRESSION 9**

Video compression techniques and Standards – MPEG video coding: MPEG-1 and MPEG-2 video coding: MPEG-3 and MPEG-4 – Motion estimation and compensation techniques – H.261 Standard – DVI technology – DVI real time compression – Current Trends in Compression standards.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C1PE23.1	Explain the various error free and lossless compression and quantization techniques.	K2
C1PE23.2	Apply Huffman coding Arithmetic coding, Shannon fano coding, Dictionary techniques and other algorithm for text compression	K3
C1PE23.3	Compare various compression standards applying for image processing	K4
C1PE23.4	Compare various compression standards applying for audio processing	K4
C1PE23.5	Implement basic compression algorithms with MATLAB and its equivalent open source environments for audio compression	K3
C1PE23.6	Compare various compression standards applying for video processing	K4

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE23.1	K2	2		1					2		2	
C1PE23.2	K3	3	2	3					1		1	1
C1PE23.3	K4	3	1	2								
C1PE23.4	K4	3	1	2

20CU5E4

**ULTRA WIDEBAND COMMUNICATION**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

This course focuses on the basic signal processing techniques that concerns present and future dynamic UWB communication systems. This course encompasses all areas of design and implementation of UWB systems.

**UNIT I INTRODUCTION TO UWB 9**

History, Definition, FCC Mask, UWB features, UWB Interference: IEEE 802.11a Interference, Signal to Interference ratio calculation, Interference with other wireless services.

**UNIT II UWB TECHNOLOGIES AND CHANNEL MODELS 9**

Impulse Radio, Pulsed Multiband, Multiband OFDM, features: Complexity, Power Consumption, Security and achievable data rate. MIMO Multiband OFDM, Differential multiband OFDM, Performance characterization, Ultra Wide Band Wireless Channels Channel model: Impulse Response Modeling of UWB Wireless Channels, IEEE UWB channel model, Path loss, Delay profiles, Time and frequency modeling.

**UNIT III UWB SIGNAL PROCESSING 9**

Data Modulation schemes, UWB Multiple Access Modulation, BER, Rake Receiver, Transmit-Reference (T-R) Technique, UWB Range-Data Rate Performance, UWB Channel Capacity, UWB Wireless Locationing: Position Locationing Methods, Time of Arrival Estimation, NLOS Location Error, Locationing with OFDM.

**UNIT IV UWB ANTENNAS 9**

Antenna Requirements, Radiation Mechanism of the UWB Antennas, Types of Broadband antennas, Parameters, Analysis of UWB Antennas, Link Budget for UWB System. Design examples of broadband UWB Antennas.

**UNIT V UWB APPLICATIONS AND REGULATIONS 9**

Wireless Ad-hoc Networking, UWB Wireless Sensor, RFID, Consumer Electronics and Personal, Asset Location, Medical applications, UWB Regulation and standards in various countries, UWB Regulation in ITU, IEEE Standardization.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C1PE24.1	Derive SINR for UWB interference standards	K3
C1PE24.2	Compute the channel parameters applicable for UWB technologies	K3
C1PE24.3	Assess the performance of UWB channels.	K3
C1PE24.4	Explain multiple access techniques and UWB wireless locationing	K2
C1PE24.5	Design and analyze antennas for UWB transmission.	K3
C1PE24.6	Explain the applications of UWB and UWB based standards.	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C1PE24.1	K3	2		1								
C1PE24.2	K3	3	1	2					1		1	
C1PE24.3	K3	3	2	3			1		1		1	1
C1PE24.4	K2	2		1								
C1PE24.5	K3	3	2	3	1				2		2	1

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C1PE25.1	Discuss the 5 G architecture regulations adopted by 5G	K2
C1PE25.2	Analyze the types and working of smart antennas pertaining to 5 G applications	K4
C1PE25.3	Apply the signal processing algorithms for smart antenna design configurations	K3
C1PE25.4	Derive adaptive beamforming algorithm for smart antenna design configurations	K3
C1PE25.5	Derive Angle of arrival estimate using Bartlett, capon, Linear prediction, max entropy, PHD, min Norm, MUSIC and ESPRIT.	K3
C1PE25.6	Compute downlink capacity gain and performance measures for MIMO antenna systems	K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11

20CU6E1

**SOFT COMPUTING TECHNIQUES AND APPLICATIONS**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

This course is intended to serve as an introduction to the field of soft computing and illustrate the potential of presenting methods in a range of case study applications. In this sense the course is not aimed at providing particularly deep theoretical insights, but rather making students familiar with fundamental concepts as well as giving them a broad perspective of emerging synergistic effects and their practical implications. The scope of the course mainly embraces neural networks, fuzzy systems, genetic algorithm, Neuro fuzzy modelling and evolutionary computing paradigms with applications in pattern recognition, optimization, forecasting and control among others.

**UNIT I      ARTIFICIAL NEURAL NETWORK      9**

Introduction-Basic concepts of Neural Network-Model of an Artificial Neuron-Characteristics of Neural Network-Learning Methods-Backpropagation Network Architecture- Backpropagation Learning-Counter Propagation Network-Hopfield/Recurrent Network- Adaptive Resonance Theory.

**UNIT II      FUZZY LOGIC      9**

Basic concepts of Fuzzy Logic-Fuzzy Sets and Crisp Sets-Fuzzy Set Theory and Operations-Properties of Fuzzy Sets-Fuzzy and Crisp relations, Fuzzy to Crisp Conversion- Membership Functions-Interference in Fuzzy Logic-Fuzzy if-then Rules, Fuzzy implications and Fuzzy Algorithms, Fuzzification and Defuzzification-Fuzzy Controller.

**UNIT III      NEURO-FUZZY MODELLING      9**

ANFIS Architecture-Classification and Regression, Trees-DataClusteringalgorithms – Rulebase Structure Identification.

**UNIT IV      GENETICALGORITHMS      9**

Basic concepts-Working Principle-Inheritance Operators-Cross Over- Inversion and Deletion- Mutation Operator-Generation Cycle.

**UNIT V      APPLICATIONS OF SOFTCOMPUTING      9**

Genetic Algorithm Application- Bagley and Adaptive Game-Playing Program- Greg Viols Fuzzy Cruise Controller-Air Conditioner Controller-Application of Back Propagation Neural Network.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C2PE1.1	Derive back propagation and counter propagation algorithm for artificial neural network K3	K3
C2PE1.2	Explain the concepts of neural network theory. K2	K2
C2PE1.3	Apply the Fuzzy logic algorithms for optimization problems. K3	K3
C2PE1.4	Develop Neuro fuzzy models for real-time applications. K3	K3
C2PE1.5	Apply neural networks and genetic algorithms for optimization problems. K3	K3
C2PE1.6	Apply the soft computational techniques to solve the research oriented problems. K3	K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C2PE1.1	K3	3	1	2			1					
C2PE1.2	K2	2		1								
C2PE1.3	K3	3	2	3	1							1
C2PE1.4	K3	3		2					2		2	
C2PE1.5	K3	3	2	3					1		1	
C2PE1.6	K3	3	2	3					1		1

**NETWORK PROCESSORS**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

The course gives an introduction to network processors, including architecture and how such devices can be used in a system. Additionally, the course looks at how to program Intel IXP network processors and how to use these in a distributed multimedia system.

**UNIT I INTRODUCTION**

**9**

Traditional protocol processing Systems – Network processing Hardware – Basic Packet Processing Algorithms and data Structures - Packet processing functions – Protocol Software – Hardware Architectures for Protocol processing – Classification and Forwarding Switching Fabrics.

**UNIT II NETWORK PROCESSOR TECHNOLOGY**

**9**

Network Processors: Motivation and purpose - Complexity of Network Processor Design – Network Processor Architectures: architectural variety, architectural characteristics, Peripheral Chips supporting Network Processors: Storage processors, Classification Processors, Search Engines, Switch Fabrics, Traffic Managers.

**UNIT III COMMERCIAL NETWORK PROCESSORS**

**9**

Multi-Chip Pipeline, Augmented RISC processor, Embedded Processor plus Coprocessors, Pipeline of homogeneous processors. Configurable Instruction set processors – Pipeline of heterogeneous processors – Extensive and Diverse processors – Flexible RISC plus Coprocessors – Scalability issues – Design Tradeoffs and consequences.

**UNIT IV NETWORK PROCESSOR: ARCHITECTURE AND PROGRAMMING**

**9**

Intel Network Processor Architecture: Multi headed Architecture Overview – Features - Embedded EISC processor - Packet Processor Hardware – Memory interfaces – System and Control Interface Components – Bus Interface. Programming Software Development Kit-IXP Instruction set – register formats – Micro Engine Programming – Intra-thread and Inter-thread communication– thread synchronization – developing sample applications – control plane – ARM programming.

**UNIT V IOS TECHNOLOGIES**

**9**

CISCO IOS – Connectivity and scalability – high availability – IP routing – IP services – IPV6 – Mobile IP – MPLS – IP Multicast – Manageability – QoS – Security – Switching – Layer VPN2.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C2PE2.1	Explain the basic network processing hardware, packet processing functions and hardware architecture for protocol processing.	K2
C2PE2.2	Discuss the network processor architecture and its components.	K2
C2PE2.3	Explain synchronous, asynchronous and wave and pipelining and parallel processing techniques in the commercial network processors.	K2
C2PE2.4	Estimate the performance parameters like area, speed, power, flexibility, multithreading and interfacing factors.	K3
C2PE2.5	Compare the different processor programming techniques.	K4
C2PE2.6	Explain the IOS technologies.	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C2PE2.1	K2	2	1	2								
C2PE2.2	K2	2		1								
C2PE2.3	K2	2		1			1		1		1	
C2PE2.4	K3	3	2	3	1							
C2PE2.5	K4	3	2	3					2		2	
C2PE2.6	K2	2		1

20CU6E3

**NETWORK MANAGEMENT SYSTEMS AND TECHNIQUES**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

The course describes about the theoretical, practical and managerial aspects of managing communication networks. It will enable the students to familiarize the various aspects of network management, need for management of complex networks, monitoring using tools, manager/agent model of remote management; the Internet management protocols - SMI, MIBs, SNMP, MIB design case studies; TMN architecture, design and Implementation of NMS tools and platforms.

**UNIT I OSI NETWORK MANAGEMENT****8**

OSI Network management model - Organizational model - Information model, Communication model. Abstract Syntax Notation - Encoding Structure, Macros Functional Model CMIP/CMIS.

**UNIT II BROADBAND NETWORK MANAGEMENT****9**

Broadband networks and services, ATM Technology - VP, VC, ATM Packet, Integrated service, ATM LAN emulation, Virtual LAN, ATM Network Management - ATM Network reference model, Integrated local Management Interface. ATM Management Information base, Role of SNMP and ILMI in ATM Management, M1, M2, M3, M4 interface. ATM Digital Exchange InterfaceManagement.

**UNIT III SIMPLE NETWORK MANAGEMENT PROTOCOL****10**

SNMPv1 Network Management: Communication and Functional Models. The SNMP Communication Model, Functional model. SNMP Management SNMPv2: Major Changes in SNMPv2, SNMPv2 System Architecture, SNMPv2 Structure of Management Information, The SNMPv2 Management Information Base,SNMPv2 Protocol, Compatibility with SNMPv1.Configuration management, Fault management, Performance management, Event Correlation Techniques,security management, Accounting management, Report Management, Policy Based Management, Services Level Management.

**UNIT IV NETWORK MANAGEMENT SYSTEMS****9**

Network Management Tools, Network Statistics Measurement Systems, History of Enterprise Management, Commercial Network management Systems, System Management and Enterprise Management Solutions.

**UNIT V WEB-BASED MANAGEMENT****9**

NMS withWeb Interface and Web-Based Management, Web Interface to SNMP Management, Embedded Web-Based Management, Desktop management Interface, Web-Based Enterprise Management, WBEM: Windows Management Instrumentation, Java management Extensions, Management of a Storage AreaNetwork.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C2PE3.1	Classify and analyze the different types of network management.	K4
C2PE3.2	Apply the broad band network management concept in ATM networking.	K3
C2PE3.3	Implement the SNMP protocol through Remote Monitoring (RMON).	K4
C2PE3.4	Analyze the operation of the different versions of the SNMP protocol.	K4
C2PE3.5	Apply network management tools for the implementation of NMS.	K3
C2PE3.6	Discuss about the multi-vendor components for general purpose NMS.	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C2PE3.1	K4	3	2	3					1		1	
C2PE3.2	K3	3	1	2					1		1	
C2PE3.3	K4	3	2	3			1		1		1	
C2PE3.4	K4	3	2	3					1		1	
C2PE3.5	K3	3	1	2					1		1	
C2PE3.6	K2	2		1

20CU6E4

**COMMUNICATION NETWORK SECURITY**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

This course provides deeper understanding of cryptography, its application to network security, threats/vulnerabilities to networks and countermeasures, then to study various approaches to encryption techniques, strengths of traffic confidentiality, message authentication codes and provide solutions for their issues and be familiar with cryptographic techniques for secure communication of two parties over an insecure channel.

**UNIT I INTRODUCTION AND NUMBER THEORY 9**

Introduction to Information Security, Computer Security and Network Security. Need For Security: Security Goals, Attacks, Security Services and Mechanisms, and Techniques. Number Theory and Mathematics for Symmetric Cryptography: Finite Arithmetic, Congruence Arithmetic, Linear Congruence and Quadratic Congruence. Mathematics for Asymmetric-Key Cryptography: Fermat's Theorem and Euler's Theorem, Primes, Primality Testing, Factorization, CRT, Exponentiation. Classical Symmetric: Key Ciphers, Substitution Ciphers, Transposition Ciphers.

**UNIT II SYMMETRIC AND ASYMMETRIC CRYPTO SYSTEMS 9**

Modern Symmetric-Key Cipher - Block Ciphers (DES, 3DES, AES and its mode of operations), Stream Ciphers, Asymmetric-Key Cryptosystem- RSA, ElGamal, ECC, Key Management - Diffie-Hellman (DH) Mechanism, Kerberos – Needham Schroeder Protocol.

**UNIT III AUTHENTICATION, DIGITAL SIGNATURES AND CERTIFICATES 9**

Message Integrity and Message Authentication - Message Authentication Code (MAC), Cryptographic Hash Functions – Birthday Attacks, Digital Signatures - Digital Signature Standards (FIPS 186-2), DSA (ANSI X9.30), RSA (ANSI X9.31) – Public Key Distribution – RSA schemes, Digital Certificates - PKI Certificates, PKI Life Cycle Management.

**UNIT IV TRUSTED IDENTITY 9**

Entity Authentication: Password System- Fixed and One time Passwords (S/Key) RFC 2289 – Callback Systems, Zero Knowledge, Challenge and Response Systems – RADIUS — ITU-T X.509.

**UNIT V SECURITY AT LAYERS 9**

Network Layer Security - IPSec, Transport Layer Security- SSL/TLS, SSH, Application Layer Security– PGP, S/MIME, Firewall - Concepts, Architecture, Packet Filtering, Proxy Services and Bastion Hosts.

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C2PE4.1	Identify Security related problems in communication network systems	K2
C2PE4.2	Apply the mathematical foundation for cryptographic applications	K3
C2PE4.3	Distinguish symmetric key cipher and Asymmetric key cipher for crypto systems	K2
C2PE4.4	Explain the digital signature standards ,authentication and certificates	K2
C2PE4.5	Apply authentication code to create trusted identity	K3
C2PE4.6	Explain security at different layers	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C2PE4.1	K2	2		1					2		2	
C2PE4.2	K3	3	2	3								
C2PE4.3	K2	2		1								
C2PE4.4	K2	2		1					1		1	
C2PE4.5	K3	3	2	3					1		1	1
C2PE4.6	K2	2		1

20CU6E5

**HIGH PERFORMANCESWITCHING ARCHITECTURES**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

This course describes the fundamental principles to develop a comprehensive understanding of network architectures, control, performance, and wireless networks that explain current and emerging networking technologies. It also explains the evolution of data communication and networking paradigms to describe OSI and IP protocol suite. It introduces different LAN technologies to explain the overview of ATM networks. It gives exposure to the advances in packet switching architectures, IP addresses, switching solutions and approaches to integrate the best features of different architectures for high speed switching.

**UNIT I LAN SWITCHING TECHNOLOGY 9**

Switching Concepts, LAN Switching, switch forwarding techniques - cut through and store and forward, Layer 3 switching, Loop Resolution, Switch Flow control, virtual LANs.

**UNIT II ATM SWITCHING ARCHITECTURES 9**

Blocking networks – basic and enhanced banyan networks, sorting networks - merge sorting, rearrangeable networks - full and partial connection networks, non-blocking networks - Recursive network construction, comparison of non-blocking network, Switching with deflection routing - shuffle switch, tandem banyan switch.

**UNIT III QUEUES IN ATM SWITCHES 9**

Internal Queueing - Input, output and shared queueing, multiple queueing networks – combined Input, output and shared queueing - performance analysis of Queued switches.

**UNIT IV PACKET SWITCHING ARCHITECTURES 9**

Architectures of Internet Switches and Routers- Bufferless and buffered Crossbar switches, Multi-stage switching, Optical Packet switching, Switching fabric on a chip, Internally buffered Crossbars.

**UNIT V IPSWITCHING 9**

Addressing model, IP Switching types - flow driven and topology driven solutions, IP Over ATM address and next hop resolution, multicasting, IPv6 over ATM.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C2PE5.1	Explain the switching technologies applied for LAN	K2
C2PE5.2	Construct blocking, non blocking and recursive switching architectures	K3
C2PE5.3	Identify suitable switch architectures for a specified networking scenario and demonstrate its blocking performance.	K3
C2PE5.4	Analyze the queuing technologies applied in ATM switches	K4
C2PE5.5	Apply the knowledge of switching technologies, architectures and buffering strategies for designing high speed communication networks and analyze their performance.	K3
C2PE5.6	Explain the concept of IP switching types, Ip over ATM, multicasting and IPV6 over ATM	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C2PE5.1	K2	2		1								
C2PE5.2	K3	3	2	3			1		1		1	
C2PE5.3	K3	3	1	2								
C2PE5.4	K4	3	2	3					1		1	
C2PE5.5	K3	3	2	3					2		2	1
C2PE5.6	K2	2		1

20OEP31

**BUSINESS ANALYTICS**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

This course provides the detail analysis and problemsolutionsfor different industries such as manufacturing, service, retail,software, banking and finance, sports, pharmaceutical, aerospace and so on. It can provide an ability of thinking critically in making decisions based on data and deep analytics. Also, it provides technical skills in predicative and prescriptive modelling to support business decision-making.

**UNIT I BUSINESS ANALYTICS AND STATISTICAL TOOLS 9**

Overview of Business analytics, Scope of Businessanalytics, Business Analytics Process, Relationship of Business AnalyticsProcess and organization, Competitive advantages of Business Analytics, Statistical Notation, Descriptive Statistical methods,Review of probability distribution and data modelling, sampling andestimation methods overview.

**UNIT II TRENDINESS AND REGRESSION ANALYSIS 9**

Modelling Relationships and Trends inData, Simple Linear Regression.Important Resources, Business Analytics Personnel, Data and models forBusiness analytics, Problem solving, Visualizing and Exploring Data,Business Analytics Technology.

**UNIT III BUSINESS ANALYTICS AND DESCRIPTIVE ANALYTICS 9**

Organizational Structures of Business analytics, Team management,Management Issues, Designing Information Policy, Outsourcing, EnsuringData Quality, Measuring the contribution of Business analytics, ManagingChange.Descriptive Analytics, predictive analytics, predicative Modelling, Predictiveanalytics analysis, Data Mining, Data Mining Methodologies, Prescriptiveanalytics and its step in the business analytics Process, PrescriptiveModelling, Nonlinear Optimization.

**UNIT IV FORECASTING TECHNIQUES 9**

Qualitative and Judgmental Forecasting, StatisticalForecasting Models, Forecasting Models for Stationary Time Series,Forecasting Models for Time Series with a Linear Trend, Forecasting TimeSeries with Seasonality, Regression Forecasting with Casual Variables,Selecting Appropriate Forecasting Models.Monte Carle Simulation UsingAnalytic Solver Platform, New-Product Development Model, NewsvendorModel, Overbooking Model, Cash Budget Model.

**UNIT V DECISION ANALYSIS AND RECENT TRENDS IN BUSINESS ANALYTICS 9**

Formulating Decision Problems, Decision Strategies withthe without Outcome Probabilities, Decision

Trees, The Value of Information, Utility and Decision Making. Embedded and collaborative business intelligence, Visual data recovery, Data Storytelling and Data journalism.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

**After completing this course, students should demonstrate competency in the following skills:**

CO	Course Outcomes	K Level
C2OE1.1	Demonstrate the knowledge of data analytics.	K3
C2OE1.2	Demonstrate the ability of think critically in making decisions based on data and deep analytics.	K3
C2OE1.3	Demonstrate the ability to use technical skills in predicative and prescriptive modelling to support business decision-making.	K3
C2OE1.4	Demonstrate the ability to translate data into clear, actionable insights.	K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C2OE1.1	K3	3	1	2								
C2OE1.2	K3	3	2	3					1		1	
C2OE1.3	K3	3	2	3					2		2	
C2OE1.4	K3	3	2	3			1

20OEP32

**INDUSTRIAL SAFETY**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

The object of this course is to familiarize students with basic safety practices in the Electronics industry and other common industrial settings. Specifically, the course will illustrate and discuss the signage commonly used for Hazards and warning signs in the industrial workplace. The labeling used on hazardous products – including the Material Safety Data Sheet (MSDS) - will be illustrated and discussed. Standard safety precautions used when working on electrical equipment will be presented along with a discussion of electrocution hazard.

**UNIT I INDUSTRIAL SAFETY 9**

Accident, causes, types, results and control, mechanical and electrical hazards, types, causes and preventive steps/procedure, describe salient points of factories act 1948 for health and safety, wash rooms, drinking water layouts, light, cleanliness, fire, guarding, pressure vessels, etc., Safety color codes. Fire prevention and firefighting, equipment and methods.

**UNIT II FUNDAMENTALS OF MAINTENANCE ENGINEERING 9**

Definition and aim of maintenance engineering, Primary and secondary functions and responsibility of maintenance department, Types of maintenance, Types and applications of tools used for maintenance, Maintenance cost & its relation with replacement economy, Service life of equipment.

**UNIT III WEAR AND CORROSION AND THEIR PREVENTION 9**

Wear- types, causes, effects, wear reduction methods, lubricants-types and applications, Lubrication methods, general sketch, working and applications, i. Screw down grease cup, ii. Pressure grease gun, iii. Splash lubrication, iv. Gravity lubrication, v. Wick feed lubrication vi. Side feed lubrication, vii. Ring lubrication, Definition, principle and factors affecting the corrosion. Types of corrosion, corrosion prevention methods.

**UNIT IV FAULT TRACING 9**

Fault tracing-concept and importance, decision tree concept, need and applications, sequence of fault finding activities, show as decision tree, draw decision tree for problems in machine tools, hydraulic, pneumatic, automotive, thermal and electrical equipment's like, i. Any one machine tool, ii. Pump iii. Air compressor, iv. Internal combustion engine, v. Boiler, vi. Electrical motors, Types of faults in machine tools and their general causes.

**UNIT V PERIODIC AND PREVENTIVE MAINTENANCE****9**

Periodic inspection-concept and need, degreasing, cleaning and repairing schemes, overhauling of mechanical components, overhauling of electrical motor, common troubles and remedies of electric motor, repair complexities and its use, definition, need, steps and advantages of preventive maintenance. Steps/procedure for periodic and preventive maintenance of: i. Machine tools, ii. Pumps, iii. Air compressors, iv. Diesel generating (DG) sets, Program and schedule of preventive maintenance of mechanical and electrical equipment, advantages of preventive maintenance. Repair cycle concept and importance.

**TOTAL: 45 PERIODS****Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	COURSE OUTCOMES	K LEVEL
C2OE2.1	Discuss the different hazards in industry and the method of prevention.	K2
C2OE2.2	Discuss chemical hazard, toxicity fire , explosion in work place and study preventive measures	K2
C2OE2.3	Give examples about accidental data on various safety techniques.	K2
C2OE2.4	Discuss proper safety techniques on safety engineering and management	K2
C2OE2.5	Discuss various case studies on safety regulation.	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C2OE2.1	K2	2		2					1		1	
C2OE2.2	K2	2		2					1		1	
C2OE2.3	K2	2	1	1	1							
C2OE2.4	K2	2		1					2		2	
C2OE2.5	K2	2		1			1		1		1

**OPERATIONS RESEARCH**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

The objective of operations research is optimization to do things best under the given circumstances. This general concept has great many applications, for instance, in agricultural planning, biotechnology, data analysis, distribution of goods and resources, emergency and rescue operations, engineering systems design, environmental management, financial planning, health care management, inventory control, manpower and resource allocation, manufacturing of goods, military operations, production process control, risk management, sequencing and scheduling of tasks, telecommunications, and traffic control.

**UNIT I INTRODUCTION TO OPERATIONS RESEARCH 9**

Optimization Techniques, Model Formulation, models, General L.R Formulation, Simplex Techniques, Sensitivity Analysis, Inventory Control Models.

**UNIT II LINEAR PROGRAMMING PROBLEM 9**

Formulation of a LPP - Graphical solution revised simplex method - duality theory - dual simplex method - sensitivity analysis - parametric programming.

**UNIT III NON-LINEAR PROGRAMMING PROBLEM 9**

Nonlinear programming problem - Kuhn-Tucker conditions min cost flow problem - max flow problem - CPM/PERT.

**UNIT IV SCHEDULING AND SEQUENCING 9**

Scheduling and sequencing - single server and multiple server models - deterministic inventory models - Probabilistic inventory control models - Geometric Programming.

**UNIT V APPLICATIONS OF OPERATIONS RESEARCH 9**

Competitive Models, Single and Multi-channel Problems, Sequencing Models, Dynamic Programming, Flow in Networks, Elementary Graph Theory, Game Theory Simulation.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	COURSE OUTCOMES	K Level
C2OE3.1	Apply the dynamic programming to solve problems of discrete and continuous variables.	K3
C2OE3.2	Apply the concept of non-linear programming	K3
C2OE3.3	Carry out sensitivity analysis	K4
C2OE3.4	Model the real world problem and simulate it.	K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C2OE3.1	K3	3	2	3					2		1	1
C2OE3.2	K3	3	1	3								
C2OE3.3	K4	3	2	3			2		1		1	
C2OE3.4	K3	3	2	3	1	2			2		2	1

200EP34

**COST MANAGEMENT OF ENGINEERING PROJECTS**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

The objective of Project Cost Management is to ensure that the cost aspects of the project are delivered. This must be achieved within the overall project objectives, in particular the (usually) need to maximize value for the client's business. Most of the key decisions which will influence the cost outcome of a project will be made in the project development and definition phase. Hence, effective decision making and cost management in this phase is vital.

**UNIT I INTRODUCTION TO STRATEGIC COST MANAGEMENT PROCESS 9**

Cost concepts in decision-making, Relevant cost, Differential cost, Incremental cost and Opportunity cost. Objectives of a Costing System, Inventory valuation, Creation of a Database for operational control, Provision of data for Decision-Making.

**UNIT II PROJECT MANAGEMENT 9**

Project: Meaning, Different types, why to manage, cost overruns centres, various stages of project execution: conception to commissioning. Project execution as conglomeration of technical and nontechnical activities. Detailed Engineering activities. Pre project execution main clearances and documents Project team: Role of each member. Importance Project site: Data required with significance. Project contracts. Types and contents. Project execution Project cost control. Bar charts and Network diagram. Project commissioning: mechanical and process.

**UNIT III COST BASED DECISION-MAKING 9**

Cost Behavior and Profit Planning Marginal Costing, Distinction between Marginal Costing and Absorption Costing, Break-even Analysis, Cost-Volume-Profit Analysis. Various decision-making problems. Standard Costing and Variance Analysis.

**UNIT IV PRICING STRATEGIES 9**

Pricing: Pareto Analysis, Target costing, Life Cycle Costing. Costing of service sector. Just-in-time approach, Material Requirement Planning, Enterprise Resource Planning, Total Quality Management and Theory of constraints. Activity-Based Cost Management, Bench Marking, Balanced Score Card and Value-Chain Analysis. Budgetary Control, Flexible Budgets, Performance budgets, Zero-based budgets. Measurement of Divisional profitability pricing decisions including transfer pricing.

**UNIT V PRACTICAL COST MANAGEMENT 9**

Quantitative techniques for cost management, Linear Programming, PERT/CPM, Transportation problems, Assignment problems, Simulation, Learning Curve Theory.

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C2OE4.1	Create the project requirements document and project scope statement.	K5
C2OE4.2	Identify ways to control the scope of the project.	K2
C2OE4.3	Create a work breakdown structure and develop work packages.	K5
C2OE4.4	Develop a critical path Schedule.	K3
C2OE4.5	Perform a cost and schedule analysis.	K3
C2OE4.6	Calculate planned and earned value to compare with actual cost.	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C2OE4.1	K5	3	1	2			2	3	2		2	1
C2OE4.2	K2	3		2	1				2		2	
C2OE4.3	K5	3	1	2			2	3	2		2	1
C2OE4.4	K3	3	3	2								
C2OE4.5	K3	3	1	2			2	3	2		2	1
C2OE4.6	K2	3		2					1		1

20OEP35

**COMPOSITE MATERIALS**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

This course is intended to introduce students a new composite course that focuses on student learning outcomes for community college students, future designers, and technicians. These students are trained with computer-aided design, engineering graphics, and lab testing in their co-op jobs. Therefore, they are in need of learning the principles of designing components made of composite materials. The basics of composite properties, mechanics, and manufacturing processes are introduced. Design guidelines and drafting notations will be emphasized for composite components with various fiber-reinforcements, such as unidirectional fibers, random short fibers, and laminate stacking sequences.

**UNIT I INTRODUCTION 9**

Definition – Classification and characteristics of Composite materials. Advantages and application of composites. Functional requirements of reinforcement and matrix. Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance.

**UNIT II REINFORCEMENTS 9**

Preparation-layup, curing, properties and applications of glass fibers, carbon fibers, Kevlar fibers and Boron fibers. Properties and applications of whiskers, particlereinforcements. Mechanical Behavior of composites: Rule of mixtures, Inverse rule of mixtures. Isostrain and Isostress conditions.

**UNIT III MANUFACTURING OF METAL MATRIX COMPOSITES 9**

Casting – Solid State diffusion technique, Cladding – Hot isostatic pressing. Properties and applications. Manufacturing of Ceramic Matrix Composites: Liquid Metal Infiltration – Liquid phase sintering. Manufacturing of Carbon – Carbon composites: Knitting, Braiding, Weaving. Properties and applications.

**UNIT IV MANUFACTURING OF POLYMER MATRIX COMPOSITES 9**

Preparation of Moulding compounds and prepregs – hand layup method – Autoclave method – Filament winding method – Compression moulding – Reaction injection moulding. Properties and applications.

**UNIT V STRENGTH 9**

Laminar Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hydrothermal failure. Laminate first ply failure-insight strength; Laminate strength-ply discount truncated maximum strain criterion; strength design using caplet plots; stress concentrations.

TOTAL: 45 PERIODS

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C2OE5.1	Identify the fundamental properties of composite materials.	K2
C2OE5.2	Apply the fundamental principles and mechanics of composite materials.	K3
C2OE5.3	Apply modern analytical techniques to mechanical systems with composite materials	K3
C2OE5.4	Apply computational techniques to mechanical systems with composite materials.	K3
C2OE5.5	Explain the manufacturing processes and cost analysis in composite materials.	K2
C2OE5.6	Demonstrate effective communication and teamwork skills through technical presentations and reports in term projects.	K3

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C2OE5.1	K2	3		2					2		2	
C2OE5.2	K3	3	2	3					2		2	
C2OE5.3	K3	3	2	3	2	3			2		2	
C2OE5.4	K3	3	2	3	2	3			2		2	
C2OE5.5	K2	3	1	2			2	3	2		2	1
C2OE5.6	K3	3	1	2			2	3	3		3	1

**WASTE TO ENERGY**

L	T	P	C
3	0	0	3

**OBJECTIVES:**

This course is intended to provide an integrated framework for the teaching, research, and application of science and engineering to the sustained production, transformation, utilization and impact of biomass energy. Coverage focuses on four main areas: biomass and bioenergy; bioenergy production and accounting; biomass conversion and end-use technologies; and an appraisal of the costs and benefits of biomass energy.

**UNIT I INTRODUCTION TO ENERGY FROM WASTE 9**

Classification of waste as fuel – Agro based, Forestresidue, Industrial waste - MSW – Conversion devices – Incinerators, gasifiers, digestors.

**UNIT II BIOMASS PYROLYSIS 9**

Pyrolysis – Types, slow fast – Manufacture of charcoal – Methods -Yields and application – Manufacture of pyrolytic oils and gases, yields and applications.

**UNIT III BIOMASS GASIFICATION 9**

Gasifiers – Fixed bed system – Downdraft and updraft gasifiers –Fluidized bed gasifiers – Design, construction and operation – Gasifier burner arrangement forthermal heating – Gasifier engine arrangement and electrical power – Equilibrium and kineticconsideration in gasifier operation.

**UNIT IV BIOMASS COMBUSTION 9**

Biomass stoves – Improved chullahs, types, some exotic designs,Fixed bed combustors, Types, inclined grate combustors, Fluidized bed combustors, Design,construction and operation - Operation of all the above biomass combustors.

**UNIT V BIOGAS 9**

Properties of biogas (Calorific value and composition) - Biogas plant technologyand status - Bio energy system - Design and constructional features - Biomass resources and theirclassification - Biomass conversion processes - Thermo chemical conversion - Direct combustion -biomass gasification - pyrolysis and liquefaction - biochemical conversion - anaerobic digestion -Types of biogas Plants – Applications - Alcohol production from biomass - Bio diesel production -Urban waste to energy conversion - Biomass energy programme in India.

**TOTAL: 45 PERIODS**

**Course Outcomes (COs):**

After completing this course, students should demonstrate competency in the following skills:

CO	Course Outcomes	K Level
C2OE6.1	Discuss the different types of bio-mass resources.	K2
C2OE6.2	Describe the process of Pyrolysis for manufacturing of fuels in the form of solid, liquid and gases from the bio-mass.	K2
C2OE6.3	Compare different types of Gasifiers used to produce producer gas with its construction, advantages and disadvantages.	K4
C2OE6.4	Describe the construction, design and operation of various types of bio	K2
C2OE6.5	Analyze the cost	K4
C2OE6.6	Describe the biochemical conversion process	K2

Course outcomes ↓	K Level	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11
C2OE6.1	K2	3		1					2		2	1
C2OE6.2	K2	3	1	2	2	2	2	2				
C2OE6.3	K4	3	2	2	2	2			2		2	
C2OE6.4	K2	3	1	2					3		2	
C2OE6.5	K4	3	1	2			2	3	2		2	1
C2OE6.6	K2	3		1					2		2	

- CO1** : Understand the technologies for generation of energy from solid waste.
- CO2** : Identify remedies/potential solutions to the supply and environmental issues associated with biomass based energy resources.
- CO3** : Identify sources of energy from bio-chemical conversion.
- CO4** : Understand and assess the biomass resource, appropriate conversion technology for the given biomass resource and end use.
- CO5** : Evaluate the cost-benefit of various biomass energy conversion processes.
- CO6** : Describe the challenges/risks involved in the waste disposal and identify appropriate waste management technique to handle and turn waste to energy.

**ENGLISH FOR RESEARCH PAPER WRITING**

L	T	P	C
2	0	0	0

**OBJECTIVES:**

This course is intended to provide an integrated framework for the students can able to:

- Understand that how to improve your writing skills and level of readability
- Learn about what to write in each section
- Understand the skills needed when writing a Title
- Ensure the good quality of paper at very first-time submission

<b>UNIT I</b>	Planning and Preparation, Word Order, Breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness.	<b>4</b>
<b>UNIT II</b>	Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticising, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts and Introduction.	<b>4</b>
<b>UNIT III</b>	Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check.	<b>4</b>
<b>UNIT IV</b>	Key skills are needed when writing a Title, Key skills are needed when writing an Abstract, Key skills are needed when writing an Introduction, Skills needed when writing a Review of the Literature.	<b>4</b>
<b>UNIT V</b>	Skills are needed when writing the Methods, Skills needed when writing the Results, Skills are needed when writing the Discussion, Skills are needed when writing the Conclusions.	<b>4</b>
<b>UNIT VI</b>	Useful phrases, How to ensure paper is as good as it could possibly be the first-	<b>4</b>

timesubmission.

**TOTAL: 24 PERIODS**

**DISASTER MANAGEMENT**

L	T	P	C
2	0	0	0

**OBJECTIVES:**

This course is intended to provide an integrated framework for the students can able to:

- Learn to demonstrate a critical understanding of key concepts in disaster risk reduction and humanitarian response.
- Critically evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
- Develop an understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
- Critically understand the strengths and weaknesses of disaster management approaches, planning and programming in different countries, particularly their home country or the countries they work in.

<b>UNIT I</b>	<b>Disaster:</b> Definition, Factors and Significance, Difference between Hazard and Disaster. <b>Natural and Manmade Disasters:</b> Difference, Nature, Types and Magnitude.	<b>4</b>
<b>UNIT II</b>	<b>Repercussions of Disasters and Hazards:</b> Economic Damage, Loss of Human and Animal Life, Destruction Of Ecosystem. <b>Natural Disasters:</b> Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts and Famines, Landslides and Avalanches. <b>Man-made Disaster:</b> Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks and Spills, Outbreaks of Disease and Epidemics, War and Conflicts.	<b>4</b>
<b>UNIT III</b>	<b>Disaster Prone areas in India:</b> Study of Seismic Zones, Areas Prone to Floods and Droughts, Landslides and Avalanches; Areas Prone to Cyclonic and Coastal Hazards with Special Reference to Tsunami; Post-Disaster Diseases and Epidemics.	<b>4</b>
<b>UNIT IV</b>	<b>Disaster Preparedness and Management Preparedness:</b> Monitoring of Phenomena Triggering a Disaster or Hazard. <b>Evaluation of Risk:</b> Application of Remote Sensing, Data from Meteorological and	<b>4</b>

otherAgencies.

**Media Reports:** Governmental and Community Preparedness.

<b>UNIT V</b>	<b>Risk Assessment</b> Disaster Risk: Concept and Elements, Disaster Risk Reduction, Global and National Disaster Risk Situation. Techniques of Risk Assessment, Global Co-Operation In Risk Assessment and Warning, People's Participation in Risk Assessment. Strategies for Survival.	<b>4</b>
<b>UNIT VI</b>	Disaster Mitigation Meaning, Concept and Strategies of Disaster Mitigation, Emerging Trends in Mitigation. Structural Mitigation and Non-Structural Mitigation, Programs of Disaster Mitigation in India.	<b>4</b>

**SANSKRIT FOR TECHNICAL KNOWLEDGE**

L	T	P	C
2	0	0	0

**OBJECTIVES:**

This course is intended to provide an integrated framework for the students can able to:

- Get a working knowledge in illustrious Sanskrit, the scientific language in the world.
- Learning of Sanskrit to improve brain functioning.
- Learning of Sanskrit to develop the logic in mathematics, science and other subjects enhancing the memory power.
- The engineering scholars equipped with Sanskrit will be able to explore the huge knowledge from ancient literature.

<b>UNIT I</b>	<ul style="list-style-type: none"> <li>➤ Alphabets in Sanskrit</li> <li>➤ Past/Present/Future Tense</li> <li>➤ Simple Sentences</li> </ul>	<b>8</b>
---------------	--	----------

<b>UNIT II</b>	<ul style="list-style-type: none"> <li>➤ Order</li> </ul>	<b>8</b>
----------------	---	----------

- Introduction of roots
- Technical information about Sanskrit Literature

**UNIT III** Technical concepts of Engineering-Electrical, Mechanical, Architecture, Mathematics **8**

**TOTAL: 24 PERIODS**

**REFERENCES:**

**VALUE EDUCATION**

L	T	P	C
2	0	0	0

**OBJECTIVES:**

This course is intended to provide an integrated framework for the students can able to:

- Understand the value of education and self-development.
- Imbibe good values in students.
- Know about the importance of character.
- Learn the importance of Human values.
- Developing the overall personality.

<b>UNIT I</b>	<ul style="list-style-type: none"> <li>➤ Values and self-development –Social values and individual attitudes.</li> <li>➤ Workethics, Indian vision of humanism.</li> <li>➤ Moral and non-moral Valuation.</li> <li>➤ Standards and Principles.</li> <li>➤ Value judgements.</li> </ul>	<b>6</b>
<b>UNIT II</b>	<ul style="list-style-type: none"> <li>➤ Importance of cultivation of values.</li> <li>➤ Sense of duty.</li> <li>➤ Devotion, Self-reliance.</li> <li>➤ Confidence, Concentration.</li> <li>➤ Truthfulness, Cleanliness.</li> <li>➤ Honesty, Humanity.</li> <li>➤ Power of faith, National Unity.</li> <li>➤ Patriotism.</li> <li>➤ Love for nature, Discipline.</li> </ul>	<b>6</b>
<b>UNIT III</b>	<ul style="list-style-type: none"> <li>➤ Personality and Behaviour Development - Soul and Scientific attitude.</li> <li>➤ Positive Thinking.</li> </ul>	<b>6</b>

- Integrity and Discipline.
- Punctuality, Love and Kindness.
- Avoid fault Thinking.
- Free from anger, Dignity of Labour.
- Universal brotherhood and religious tolerance.
- True Friendship.
- Happiness vs.Suffering, Love for Truth.
- Aware of Self-Destructive habits.
- Association and Cooperation.
- Doing best for saving nature.

<b>UNIT IV</b>	<ul style="list-style-type: none"> <li>➤ Character and Competence –Holy books vs. Blind faith.</li> <li>➤ Self-Management and Good health.</li> <li>➤ Science of reincarnation.</li> <li>➤ Equality, Non-violence,Humility, Role of Women.</li> <li>➤ All religions and same message.</li> <li>➤ Mind your Mind,Self-control.</li> <li>➤ Honesty, Studying effectively.</li> </ul>	<b>6</b>
----------------	--	----------

**CONSTITUTION OF INDIA**

L	T	P	C
2	0	0	0

**OBJECTIVES:**

This course is intended to provide an integrated framework for the students can able to:

- Understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- Address the growth of Indian opinion regarding modern Indian intellectuals’ constitutional role and entitlement to civil and economic rights as well as the emergence of nationhood in the early years of Indian nationalism.
- Address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution.

<b>UNIT I</b>	<b>History of Making of the Indian Constitution:History, Drafting Committee (Composition and Working)</b>	<b>4</b>
---------------	---	----------

<b>UNIT II</b>	<b>Philosophy of the Indian Constitution:</b> Preamble, Salient Features	<b>4</b>
<b>UNIT III</b>	<b>Contours of Constitutional Rights and Duties:</b>	<b>4</b>
	<ul style="list-style-type: none"> <li>➤ Fundamental Rights</li> <li>➤ Right to Equality</li> <li>➤ Right to Freedom</li> <li>➤ Right against Exploitation</li> <li>➤ Right to Freedom of Religion</li> <li>➤ Cultural and Educational Rights</li> <li>➤ Right to Constitutional Remedies</li> <li>➤ Directive Principles of State Policy</li> <li>➤ Fundamental Duties</li> </ul>	
<b>UNIT IV</b>	<b>Organs of Governance:</b>	<b>4</b>
	<ul style="list-style-type: none"> <li>➤ Parliament</li> <li>➤ Composition</li> <li>➤ Qualifications and Disqualifications</li> <li>➤ Powers and Functions</li> <li>➤ Executive</li> <li>➤ President</li> <li>➤ Governor</li> <li>➤ Council of Ministers</li> <li>➤ Judiciary, Appointment and Transfer of Judges, Qualifications</li> <li>➤ Powers and Functions</li> </ul>	
<b>UNIT V</b>	<b>Local Administration:</b>	<b>4</b>
	<ul style="list-style-type: none"> <li>➤ District's Administration head: Role and Importance</li> <li>➤ Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation</li> <li>➤ Pachayati raj: Introduction</li> <li>➤ PRI: Zila Pachayat</li> <li>➤ Elected officials and their roles</li> <li>➤ CEO Zila Pachayat: Position and role</li> <li>➤ Block level: Organizational Hierarchy (Different departments)</li> <li>➤ Village level: Role of Elected and Appointed officials</li> <li>➤ Importance of grass root democracy</li> </ul>	
<b>UNIT VI</b>	<b>Election Commission:</b>	<b>4</b>
	<ul style="list-style-type: none"> <li>➤ Election Commission: Role and Functioning</li> </ul>	

- Chief Election Commissioner and Election Commissioners
- State Election Commission: Role and Functioning
- Institute and Bodies for the welfare of SC/ST/OBC and women

**20AC106**

**PEDAGOGY STUDIES**

L	T	P	C
2	0	0	0

**OBJECTIVES:**

This course is intended to provide an integrated framework for the students can able to:

- Review existing evidence on the review topic to inform programme design and policymaking undertaken by the Department for International Development (DFID), other agencies and researchers.
- Identify critical evidence gaps to guide the development.
- What pedagogical practices are being used by teachers in formal and informal classrooms indeveloping countries?
- What is the evidence on the effectiveness of these pedagogical practices, in what conditions, andwith what population of learners?
- How can teacher education (curriculum and practicum) and the school curriculum and guidancematerials best support effective pedagogy?

**UNIT I Introduction and Methodology: 5**

- Aims and rationale, Policy background, Conceptual framework andterminology.
- Theories of learning, Curriculum, Teacher education.
- Conceptual framework, Research questions.
- Overview of methodology and Searching.

**UNIT II Thematic Overview: 4**

- Pedagogical practices are being used by teachers in formaland informal classrooms in developing countries.

- Curriculum, Teacher education.

**UNIT III Evidence on the effectiveness of pedagogical practices: 5**

- Methodology for the in depth stage: Quality assessment of included studies.
- How can teacher education (Curriculum and Practicum) and the schoolcurriculum and guidance materials best support effective pedagogy?
- Theory of change.
- Strength and nature of the body of evidence for effective pedagogicalpractices.
- Pedagogic theory and pedagogical approaches.
- Teachers' attitudes and beliefs and Pedagogic strategies.

**UNIT IV Professional Development: 5**

- Alignment with classroom practices and follow-up support.
- Peer support.
- Support from the head teacher and the community.
- Curriculum and Assessment.
- Barriers to learning: Limited resources and large class sizes.

**UNIT V Research gaps and future directions: 5**

- Research design
- Contexts
- Pedagogy
- Teacher education
- Curriculum and assessment
- Dissemination and research impact

**STRESS MANAGEMENT BY YOGA**

L	T	P	C
2	0	0	0

**OBJECTIVES:**

This course is intended to provide an integrated framework for the students can able to:

- Achieve overall health of body and mind
- Overcome stress
- Develop healthy mind in a healthy body thus improving social health also
- Improve efficiency

<b>UNIT I</b>	<b>Ashtanga:</b> Definitions of Eight parts of yoga.	<b>8</b>
<b>UNIT II</b>	<b>Yam and Niyam:</b> Do and Not Do in life <ul style="list-style-type: none"> <li>➤ Ahinsa, Satya, Astheya, Bramhacharya and Aparigraha</li> <li>➤ Shaucha, Santosh, Tapa, Swadhyay, Ishwarpranidhan</li> </ul>	<b>8</b>
<b>UNIT III</b>	<b>Asan and Pranayam:</b> <ul style="list-style-type: none"> <li>➤ Various yoga poses and their benefits for mind and body</li> <li>➤ Regularization of breathing techniques and its effects - Types of Pranayam</li> </ul>	<b>8</b>

**PERSONALITY DEVELOPMENT THROUGH LIFE ENLIGHTENMENT SKILLS**

L	T	P	C
2	0	0	0

**OBJECTIVES:**

This course is intended to provide an integrated framework for the students can able to:

- Learn to achieve the highest goal happily
- Become a person with stable mind, pleasing personality and determination
- Awaken wisdom in students
- Study of Shrimad-Bhagwad-Geeta will help the student in developing his personality and achieve the highest goal in life
- The person who has studied Geeta will lead the nation and mankind to peace and prosperity
- Study of Neetishatakam will help in developing versatile personality of students.

**UNIT I Neetisatakam - Holistic development of personality: 8**

- Verses- 19,20,21,22 (Wisdom)
- Verses- 29,31,32 (Pride and Heroism)
- Verses- 26,28,63,65 (Virtue)
- Verses- 52,53,59 (Dont's)
- Verses- 71,73,75,78 (Do's)

**UNIT II Approach to day-to-day work and duties:Shrimad Bhagwad Geeta 8**

- Chapter 2 - Verses - 41, 47, 48
- Chapter 3-Verses - 13, 21, 27, 35
- Chapter 6-Verses - 5,13,17,23, 35
- Chapter 18 – Verses - 45, 46, 48

**UNIT III Statements of basic knowledge: Shrimad Bhagwad Geeta 8**

- Chapter2-Verses - 56, 62, 68
- Chapter 12 -Verses - 13, 14, 15, 16,17, 18

**Personality of role model: Shrimad Bhagwad Geeta**

- Chapter2-Verses – 17
- Chapter 3-Verses - 36,37, 42
- Chapter 4 - Verses - 18, 38,39
- Chapter18 - Verses - 37,38,63

**TOTAL: 24 PERIODS**
